1. Specifications

Technical Specification

	Pro8100
Display Type	3 x 0.74-inch LCD projector
Resolution(Pixels)	1920 x 1080 (1.07 Billion Colors)
F #	F = 1.83 – 2.36
Focal Length	f = 23.5 to 37.6 mm
Focus / Zoom	Motorized / Motorized 1.6x
Lens shift	Vertical: ±75% Horizontal: ±5%
Projection distance	40" – 300"
Computer input	Analog RGB, D-sub 15 pin
Video input	HDMIx2, Component video (YCbCr/YPbPr)x2, Composite videox1, S-Videox1.
Other terminals	RS-232, USB, DC 5V, DC 12V trigger
Computer Compatibility	Please refer to timing table above.
Video Compatibility	NTSC, PAL, SECAM, 1080i/p, 720p, 576i/p, 480i/p
Scanning Frequency	
Horizontal Frequency	15-100kHz
Vertical Frequency	50 - 90Hz
Operating temperature	0°C to +40°C / 32°F to +104°F
Rated	AC 100-240V~50-60Hz 2.5A
Dimension (W x H x D)	537 x 170 x 389mm
Weight	19.4±0.44 lbs (8.8±0.2kg)

Note: Designs and specifications are subject to change without prior notice

Lamp Specification

Product Type: Short arc mercury lamp with reflector.

USHIO's Type: NSH160HO

USHIO's Lamp Driver Type: PHG201G20UU

Initial Characteristics

Initial Burner Characteristics:

Wattage(W)	Lamp Voltage(V)	Lamp Current(A)	Efficiency((lm/W)	Arc Gap(mm)
DC160	70	2.3	57	1.05

Lamp Life

The lamp life represents the average number of hours when the illuminance drops to less than 50% of its initial value under the following conditions with specific optical system. The nominal lamp life at 160W is (2000) hours. USHIO will continue its lamp life measurement.

- ◆ The lamp must be operated under the proper temperature condition.
- ◆ The lamp must be operated on the USHIO's lamp driver.
- ◆ On/Off cycle: 2 hours on, 15 minutes off.
- ◆ Ambient temperature should be room temperature (about 25°C)
- ◆ Illuminance should be measured on the specific optical system.

Attention for handling

- ◆ Do not touch the lamp until it has cooled completely, because the lamp is very hot during operation and immediately after turned off.
- ◆ The lamp has to be fixed firmly to the base or socket.
- ◆ Turn off the power supply during maintenance.
- ◆ Do not hold the lamp except outer surface of the reflector.
- ◆ Wear protective gloves and eyeglasses when handling the lamp.
- ◆ Any unusual shock or vibration to the lamp should be avoided.
- ◆ The lamp contains the mercury. Its breakage might cause mercury to flow out of the reflector. Please manage provision at the customer's product.
- ◆ Do not pull the lead wire and plug by more than 24.5N.
- ◆ Please be careful of handling the lamp because it is made of glass.
- ◆ Please notice for keeping or handling the lamp, because there is a projection of this lamp with reflector ahead.
- ◆ Do not touch the bulb and the mirror area of the reflector.

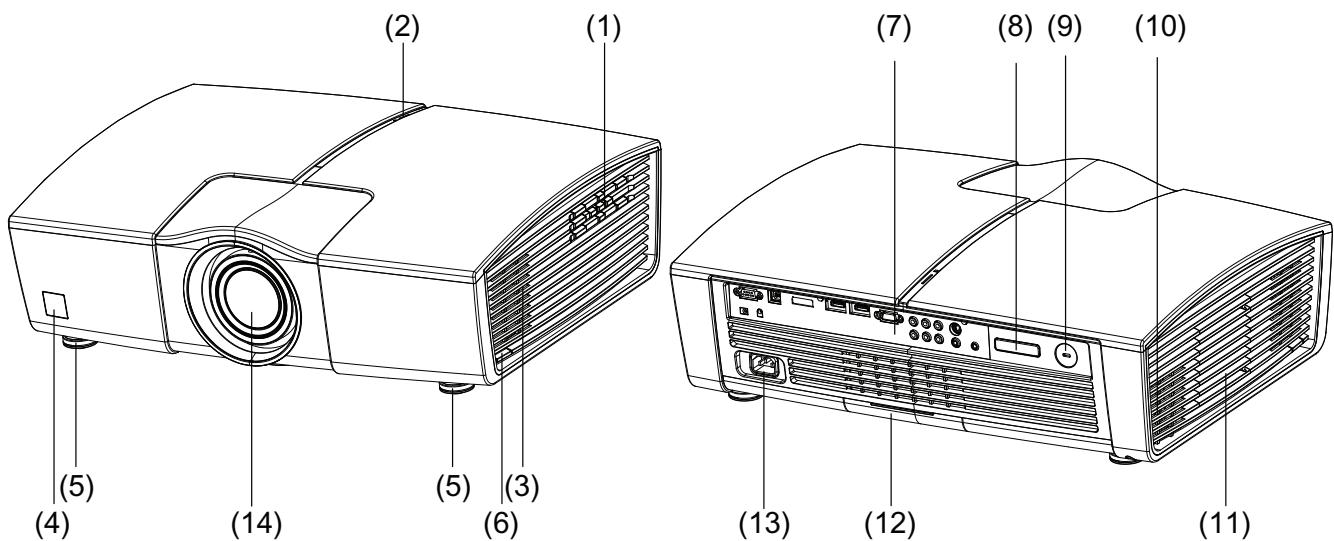

Attention for use

- ◆ Do not close or cover the lamp with any flammable stuff.
- ◆ During operation, the lamp is under extremely high pressure. Please manage provision at the customer's product to prevent fragments of bulb and mercury from flowing out of it. If the lamp bursts in case of an emergency, the sound will be occurred.
- ◆ Lamp operation should be with the specified lamp driver and the system ONLY.
- ◆ Do not look at the lamp directly during operations.
- ◆ Do not expose your skin directly. We recommend to you to put on something for protection for your skin. For example, long sleeve shirt, gloves, glasses and so on.
- ◆ Do not modify the lamp and never use a lamp that has been modified.
- ◆ Any unusual shock or vibration to the lamp should be avoided during operation.
- ◆ Do not use any broken lamps.
- ◆ Dispose of used lamps according to your local instruction.
- ◆ Do not turn on the lamp while the system is opened.
- ◆ The lamp contains mercury. If the lamp bursts during operation ventilate the area sufficiently to avoid inhaling harmful mercury fumes.
- ◆ Use the lead below 200 °C to prevent a deterioration of cladding clad of the fluorocarbon resin.
- ◆ The lead wire insulation clad shouldn't touch the reflector.
- ◆ Exchange the lamp that has already passed the life time immediately.

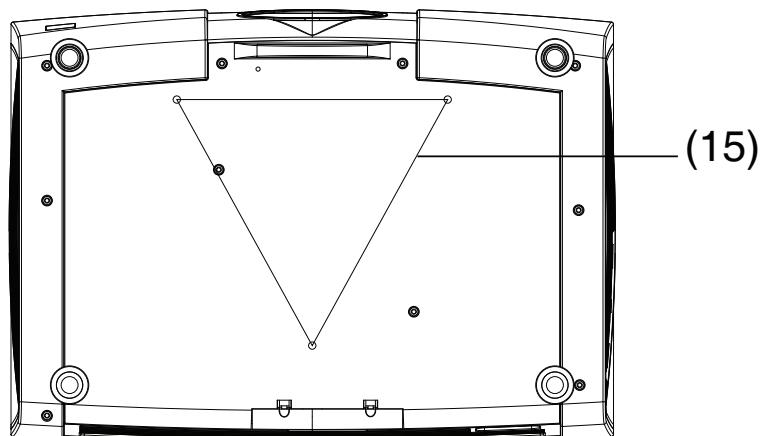

2. Front Panel Function Control Description

Location of features, Controls, and I/O

A. Projector overview

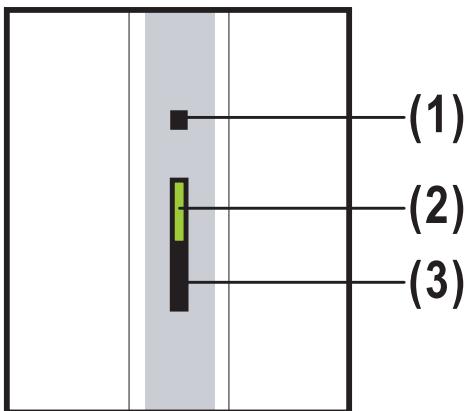

- 1. Control panel
- 2. LED indicator
- 3. Air inlet grille
- 4. Front IR remote control sensor
- 5. Elevation foot
- 6. Elevation button
- 7. Connection ports
- 8. Rear IR remote control sensor
- 9. Kensington lock
- 10. Air outlet grille
- 11. Lamp cover
- 12. Air filter cover
- 13. AC power socket
- 14. Projection lens
- 15. Ceiling mount (3-M6)

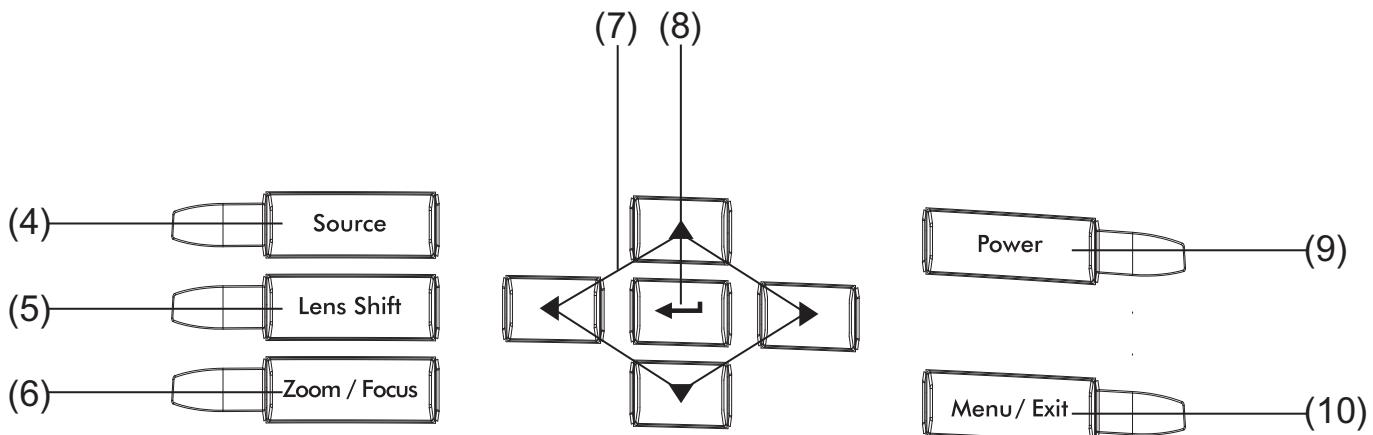

B. Control Panel

LED indicator:

1. Daylight sensor.
2. Power indicator
Refer to "LED Indicator Message" (Page 42).
3. Status indicator
Refer to "LED Indicator Message" (Page 42).

Button Function:

4. Source

Manually selects an input source.

5. Lens Shift

Motorized vertical and horizontal lens shift for positioning display image without physically moving the unit.

6. Zoom/Focus

Motorized zoom and focus adjust.

7. Four directional buttons

Use four directional buttons to select items or make adjustments to your selections.

8. Enter

To confirm selected menu item.

9. Power

Turn on or off the projector.

10. Menu/Exit

Opens and Exits the on-screen menu.

3. Circuit Description

Connector Information

This section provides each connector location on boards and function of each board. They will be useful for your detecting the defective boards.

1. Main Board

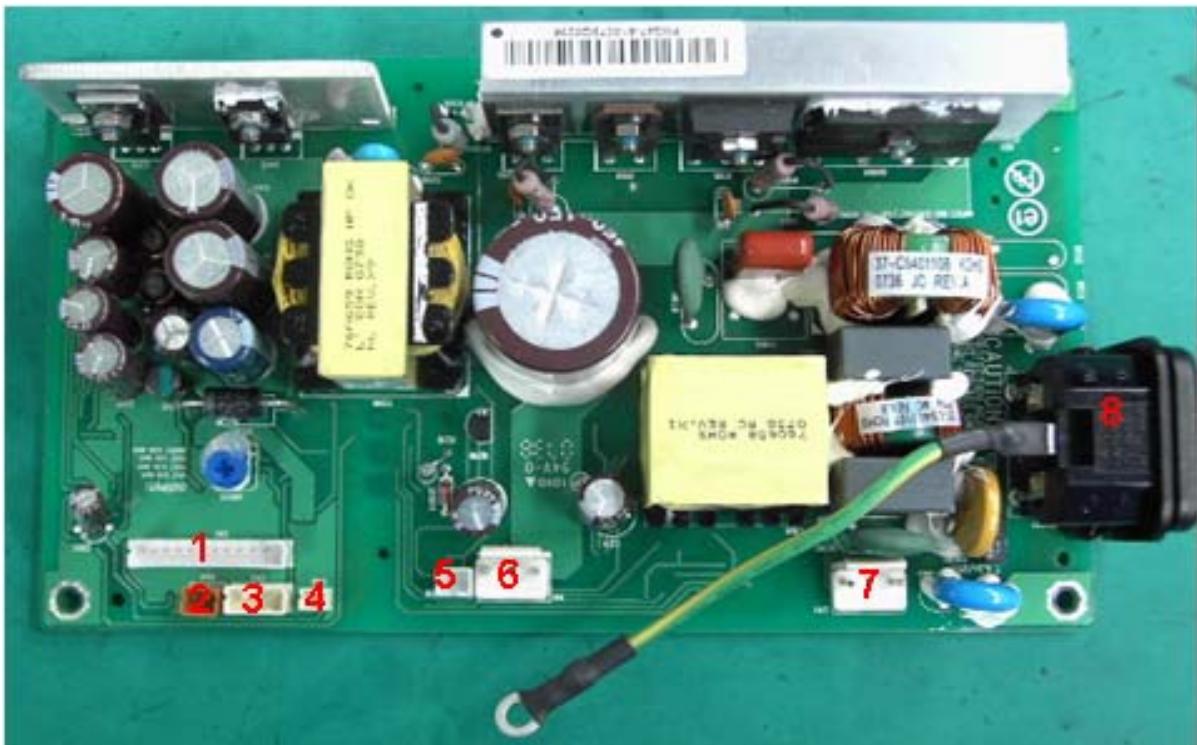

Connector	Description
No 1	Fan5, left fan housing
No 2	Connector, main board---motor board
No 3	Connector, optical engine---main board
No 4	Front IR
No 5	Fan6, right fan housing
No 6	Ballast control
No 7	Thermal sensor
No 8	Fan3
No 9	Fan2
No 10	Fan1
No 11	Back IR
No 12	12 Pin Power control
No 13	Keypad control(FPC)
No 14	Fan4
No 15	R FPCB
No 16	G FPCB
No 17	B FPCB

2. Ballast Board

Connector	Description
No 1	Power supply
No 2	Lamp power supply
No 3	Ignite signal connected to Mainboard

3. Power board

Connector	Description
No 1	12-pin power control
No 2	2 pin wire (power board-motor board)
No 3	4 pin wire(power board-DC jack board)
No 4	2 pin wire (power board-DC jack board)
No 5	unused
No 6	380V power supply
No 7	thermostat
No 8	AC Input

ANSI Lumen Measuring

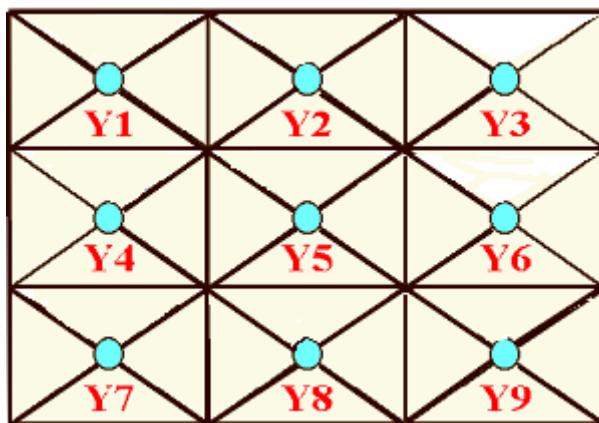

Chroma 7600 Video Pattern Generator values

Set diaphragm to wide size

Projection test chart to 60 inches (projection distance 2m) and measurement 9 points

Measuring equation: Brightness = [(Y1+Y2+...+Y9)/9] × Projection ratio

DVI Pattern: 102

4. Adjustment Procedure

Firmware Upgraded Flow

This chapter provides the information regarding relevant equipments and upgrading procedure for LCD projector firmware upgrade.

Note:

Firmware upgrade process is not necessary. Please check the firmware and composer version before any procedures. During firmware download period, please do not shut down PC or projector, this will cause flash memory's damage. And need to return the unit to manufacturer for flash memory recovery.

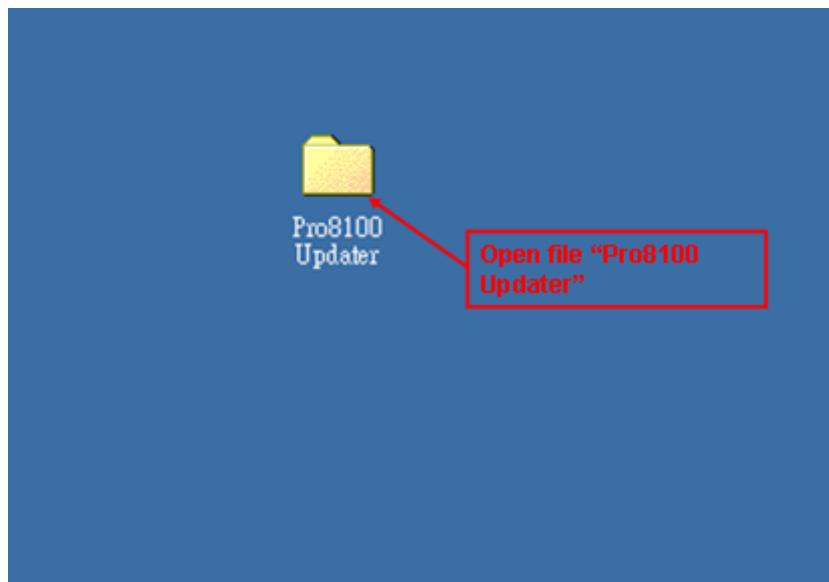

Setup Tool/Equipment

- Computer
- USB Cable
- Power Cord

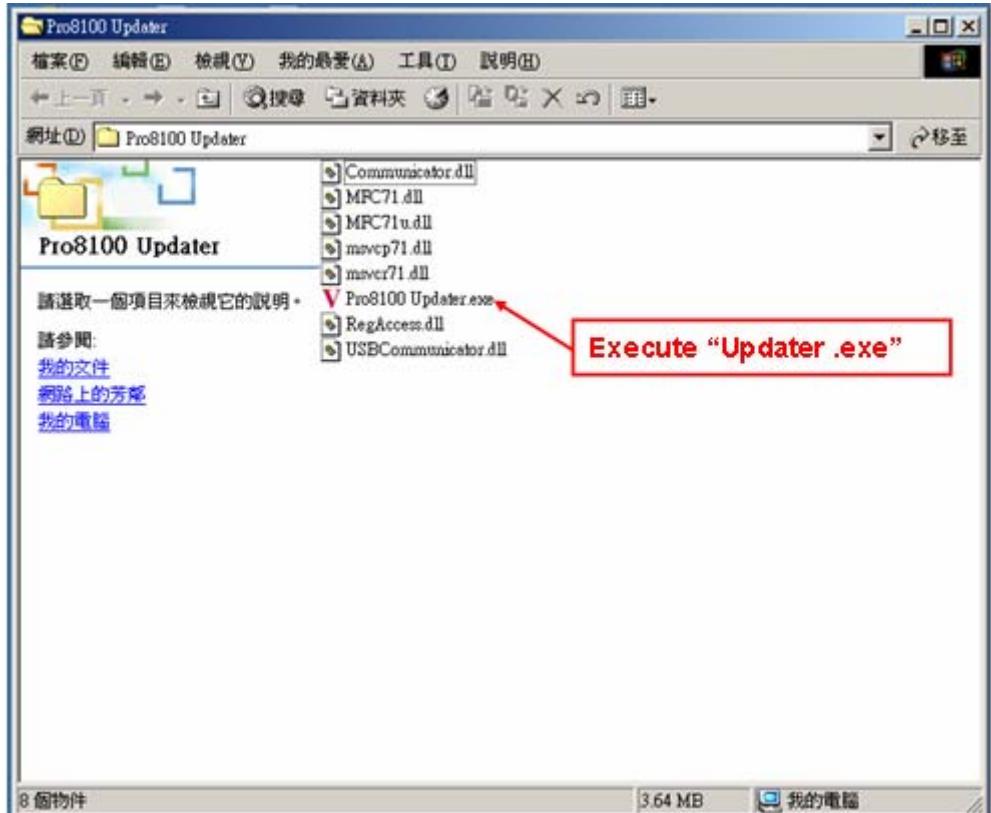

Upgrading Procedure

1. Connect USB cables on NB/PC and Pro8100.
2. To get into Service mode: Press on the Menu button then press Power button. (The Top LED will flash quickly)
3. Open “Pro8100 Updater” file

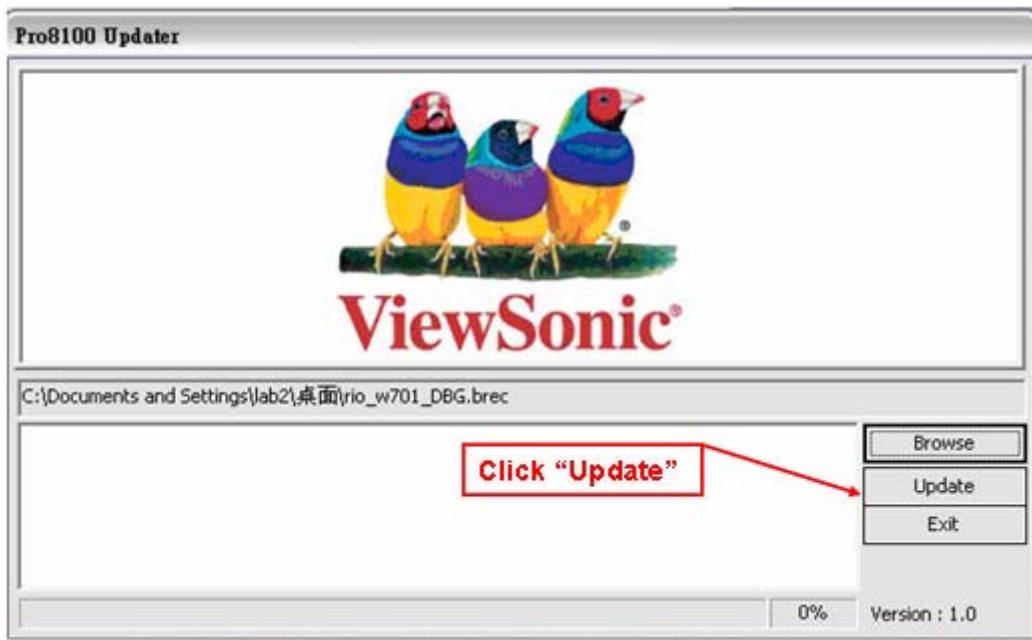

4. Execute “Updater.exe” file on the PC.

5. Click on the Browse button and browse the “xxxxx.brec” file.

6. Press Update button to upload the F/W into Pro8100.

7. After Firmware upgrades completed. Press Exit button to exit the updater. Remove USB cable and power cable.

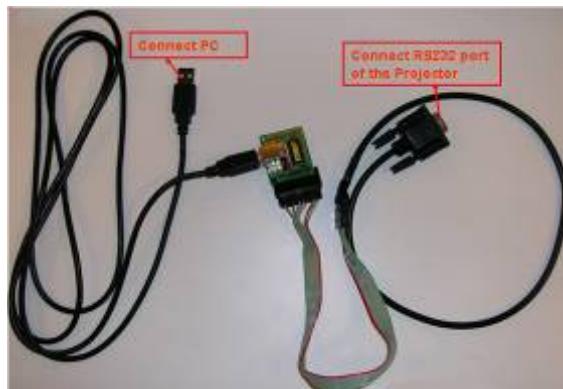

Jepico F/W update procedure

2.3 Setup Tool/Equipment

- Computer
- USB Cable
- Power Cord

2.4 Upgrading Procedure

Installing Writer SPI-ROM for L0046 Software

Notice

JEPICO Co owns the sole copyright to this software. You may not make a copy of this software. No part of this document may be produced or transmitted in any form or by any information storage and retrieval system without written permission from JEPICO Co.

System Requirements

- Microsoft Windows XP must be installed.
- Monitor supporting 1024 X 768 or greater resolution with at least 256 colors.
- 10/100 Mb Ethernet connection for downloading Microsoft .NET Framework 2.0.
- Parallel port for programming SPI-ROM. If you use ROM programmer tool, not require Parallel Port.

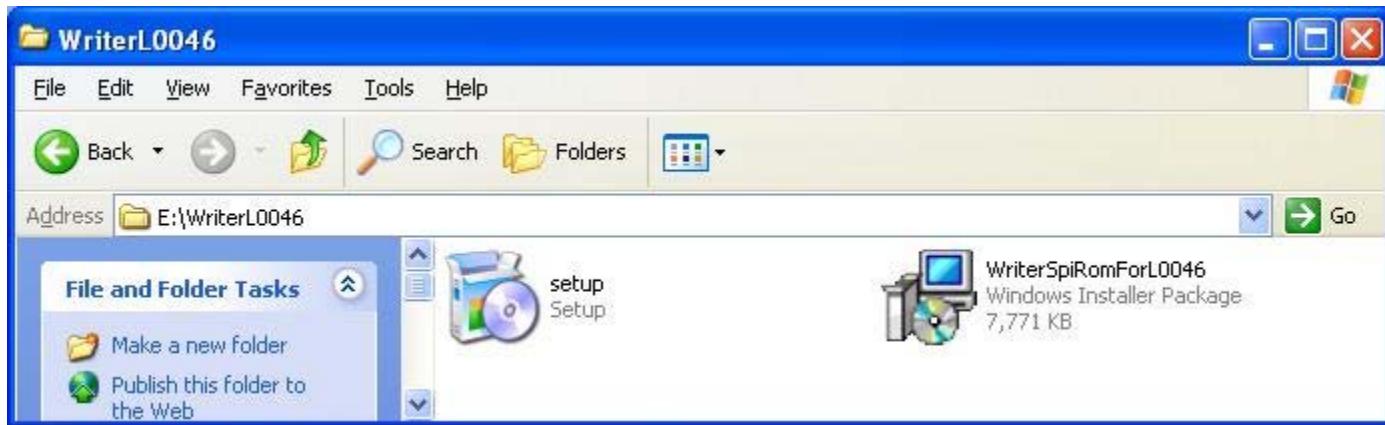

Installation Procedure

<NOTE>:

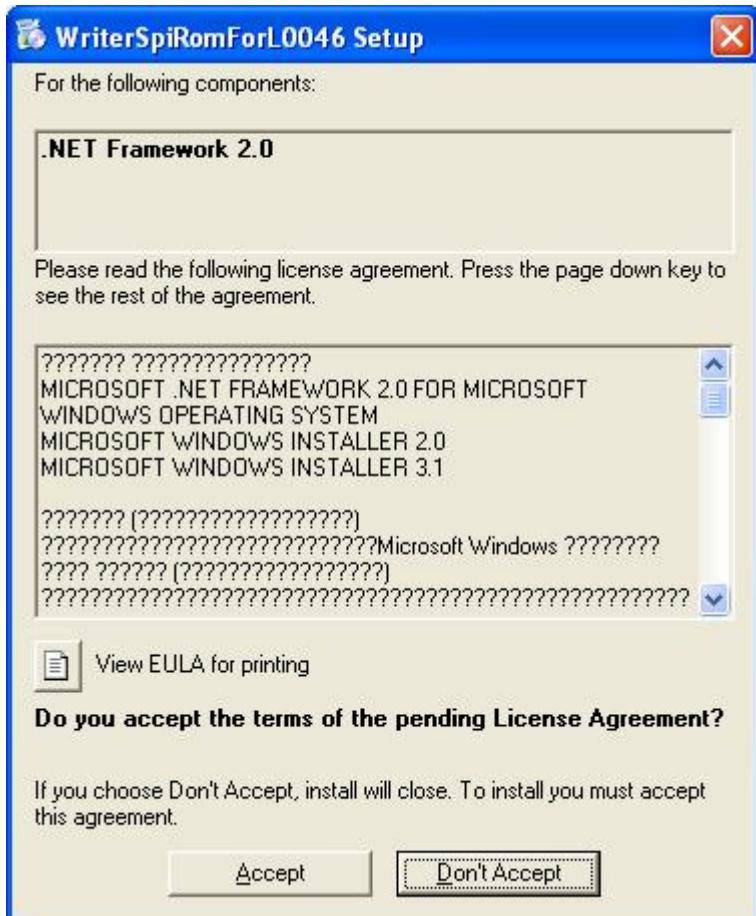

This software requires Microsoft .NET Framework 2.0 via Internet. Please make sure your PC is connected to the Internet.

1. Install WriterSpiRomForL0046 software

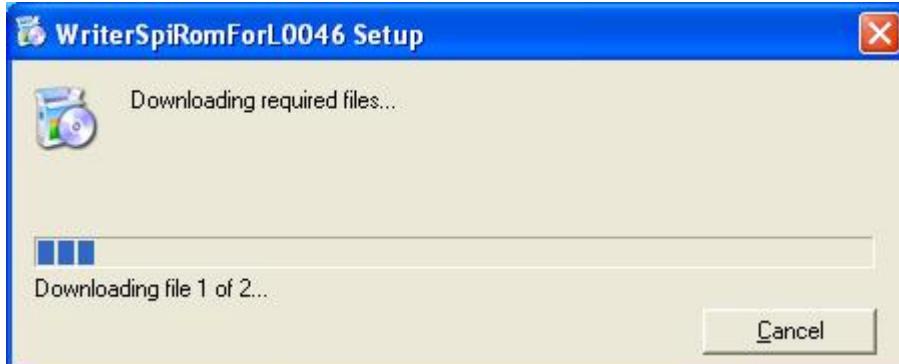

(1) Double-click setup.exe icon in the Soft directory

(2) Microsoft .NET Framework 2.0 installation wizard will launch. Click **Accept**.

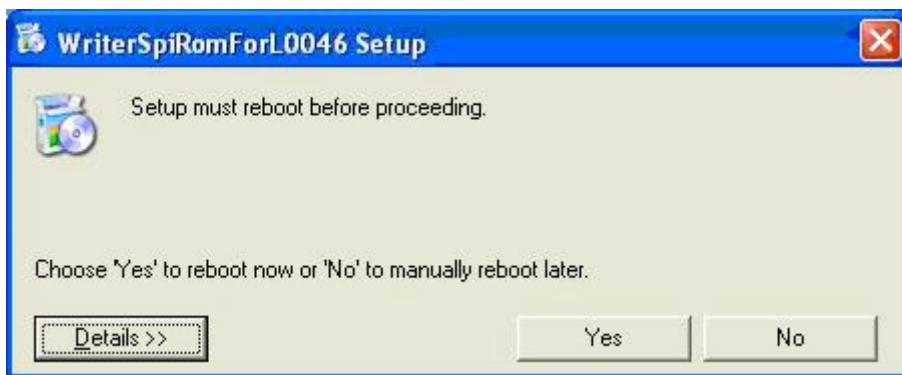

(3) This installation may take about 5 minutes.

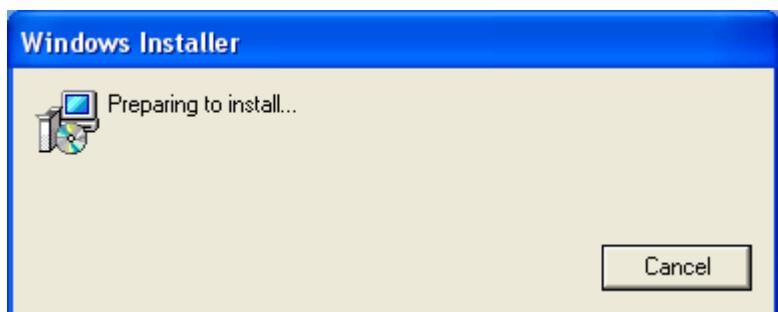

(4) After finish downloading, if you see following dialog, click Yes to reboot your PC.

If not require to reboot, you will see Welcome to the WriteSpiRom For L0046 Setup Wizard. Please go to (6).

(5) After rebooting, following dialog will be automatically appeared. If not appeared, please double-click setup.exe icon in the \Soft directory.

(6) Click **Next**.

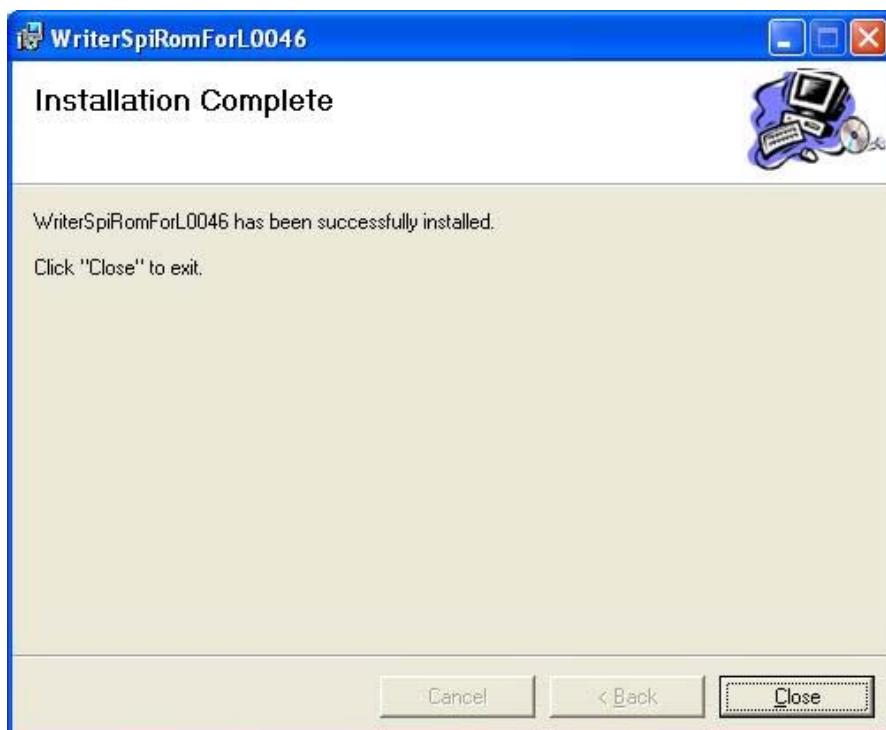

(7) Select Installation Folder by **Browse** and Click **Next**.

(8) Click **Next**.

(9) Click **Close**.

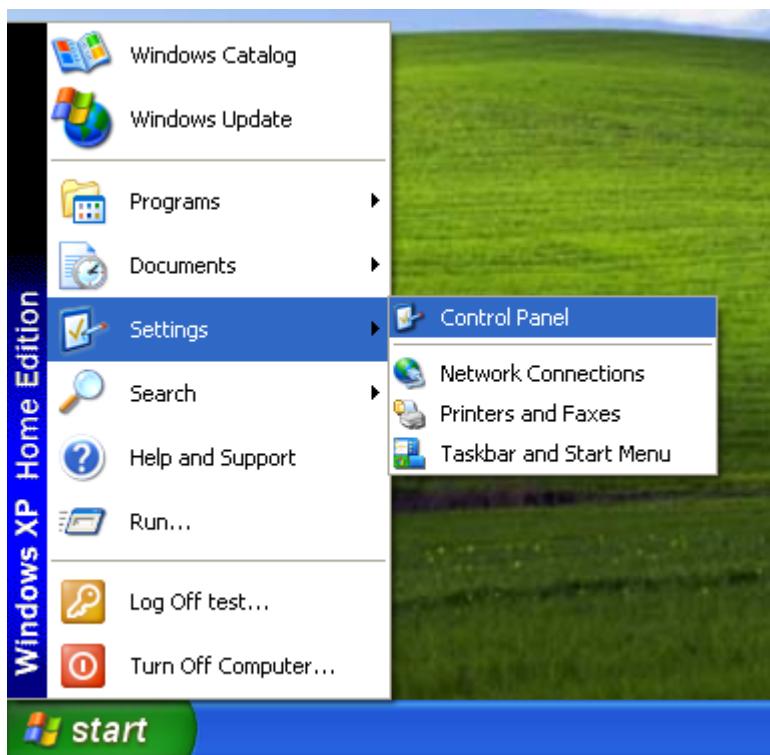

(10) After installation complete, short-cut icon will be appeared on the desk-top.

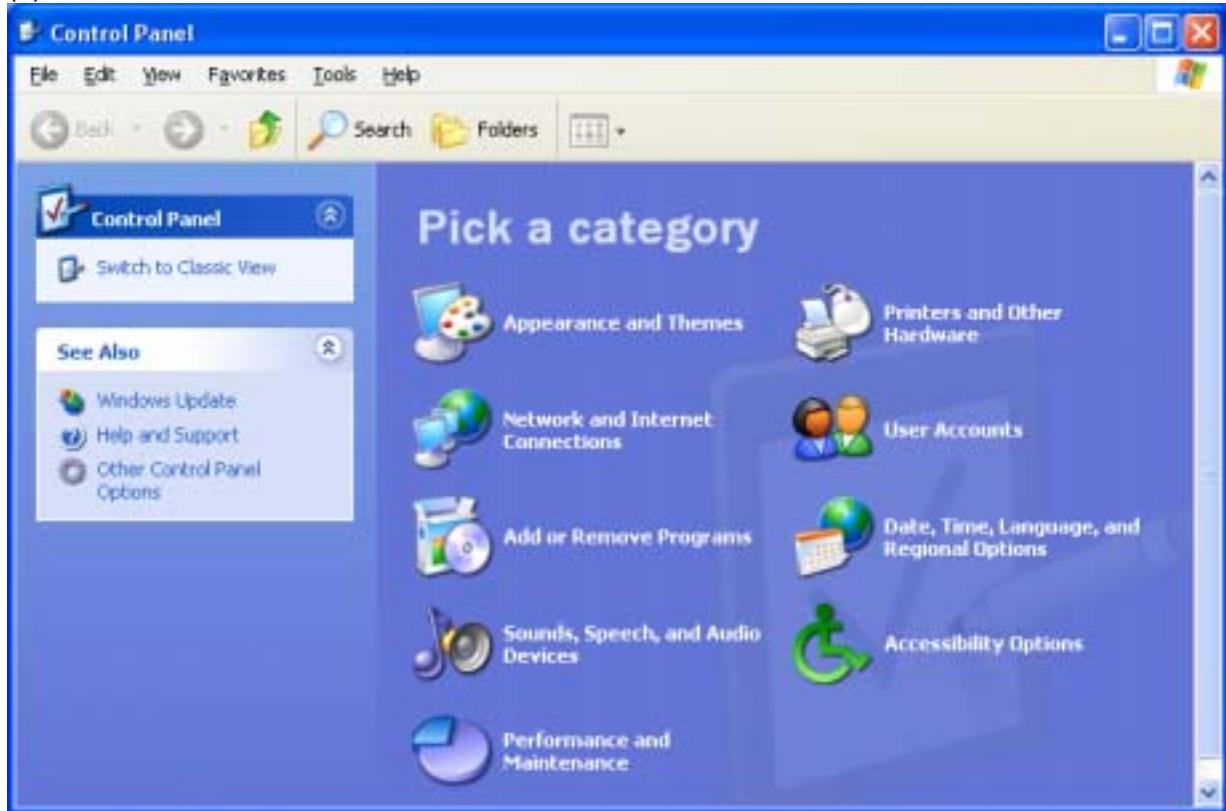

2. Install LPT Driver

If you use ROM programmer tool, LPT Driver installation is not required.

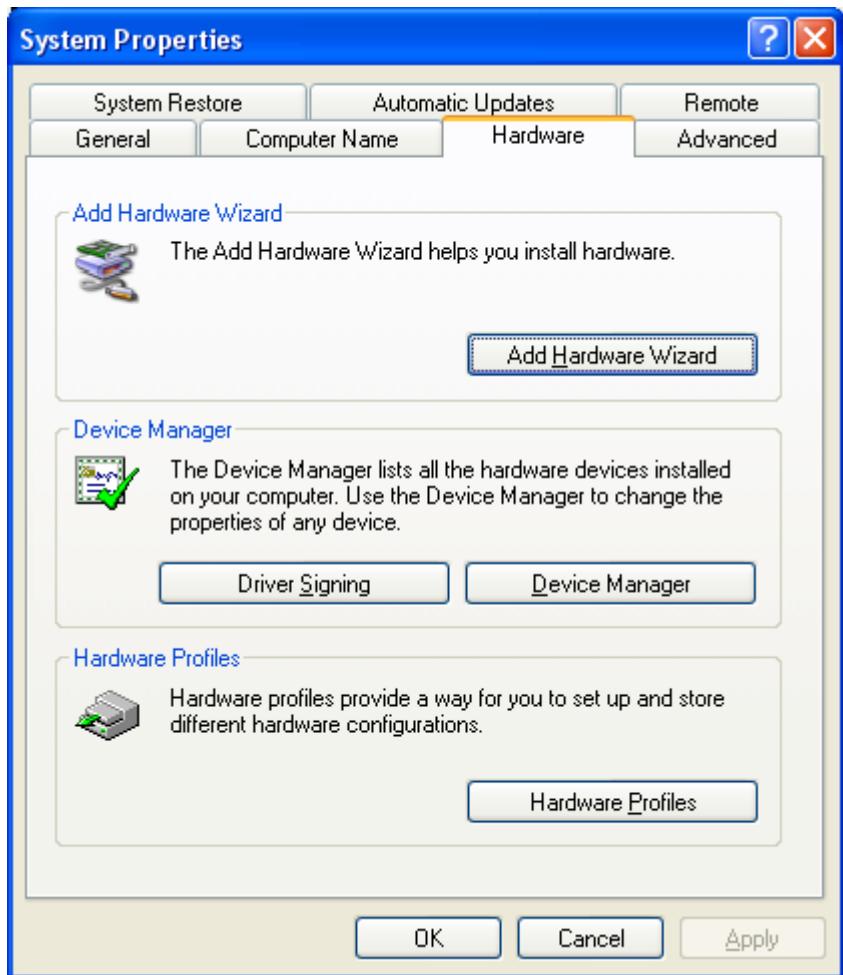

(2) Click the **Performance and Maintenance** icon.

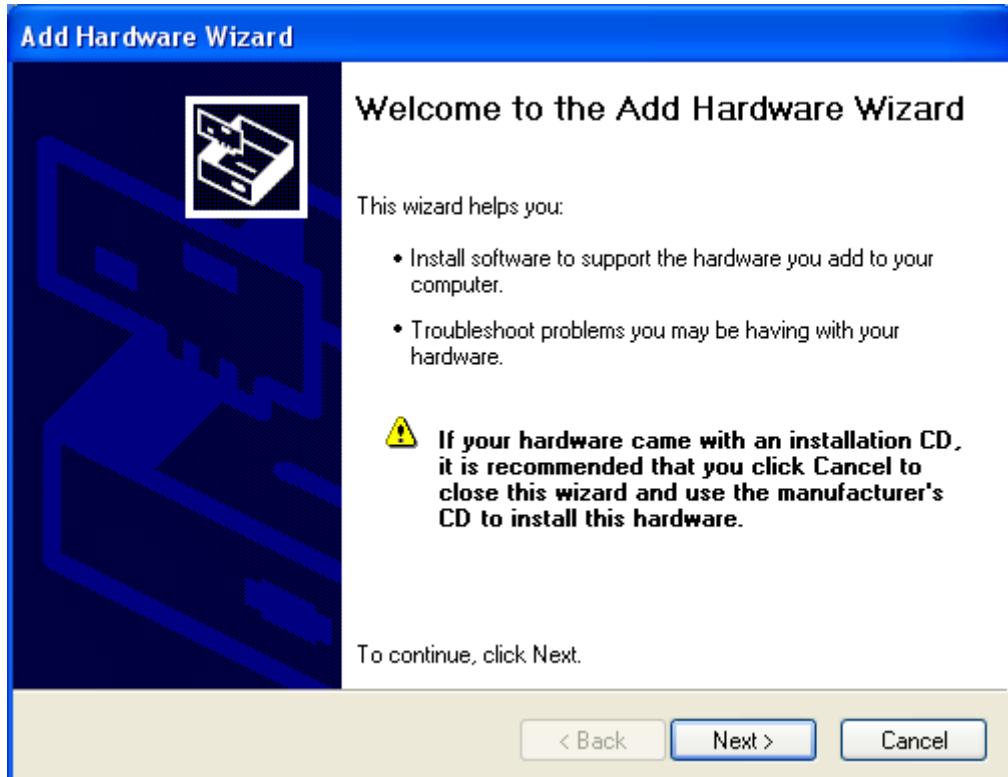

(3) Click the **System** icon

(4) Select **Hardware** menu and click **Add Hardware Wizard**.

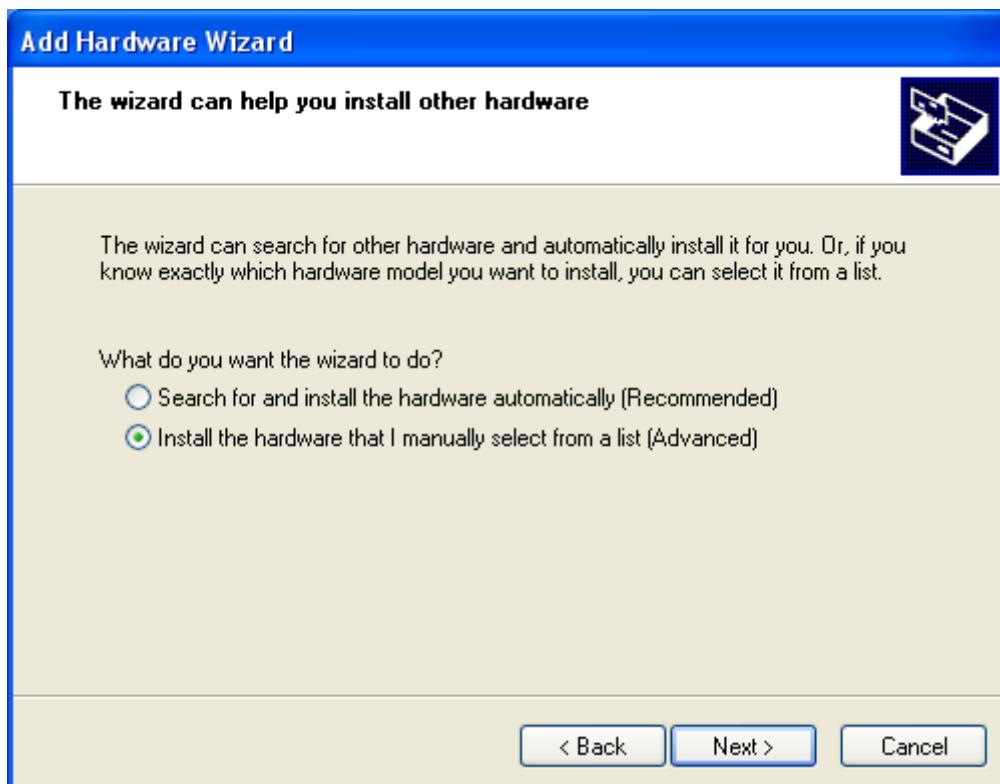

(5) Click **Next** to continue.

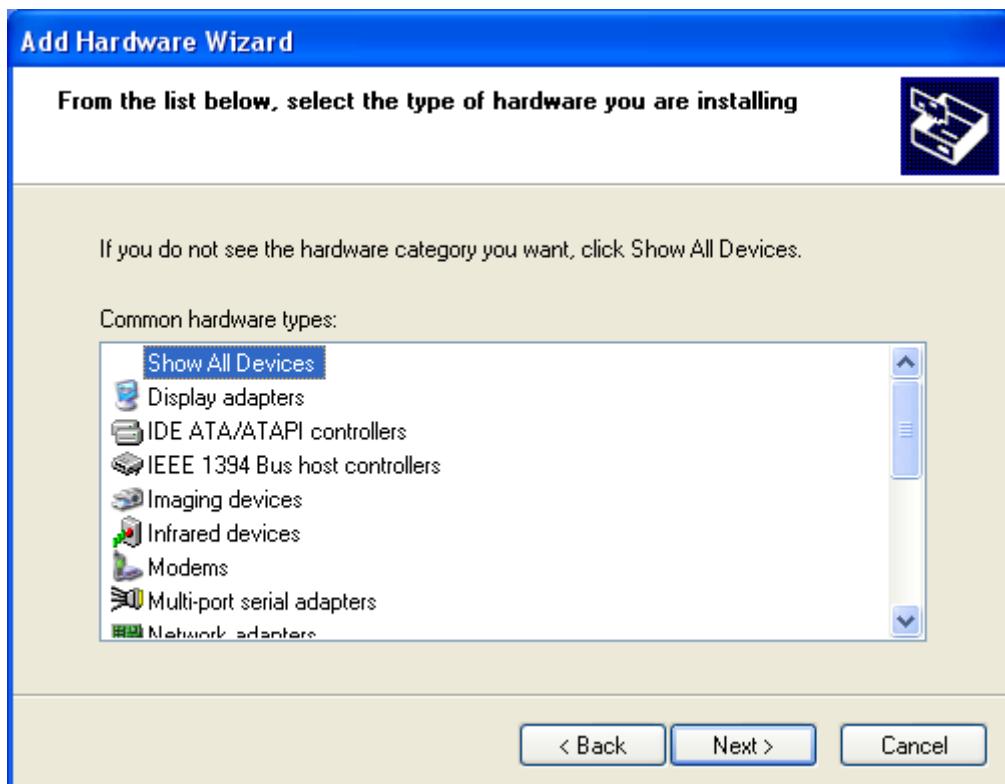

(6) Select **Yes, I have already connected the hardware** and click **Next**.

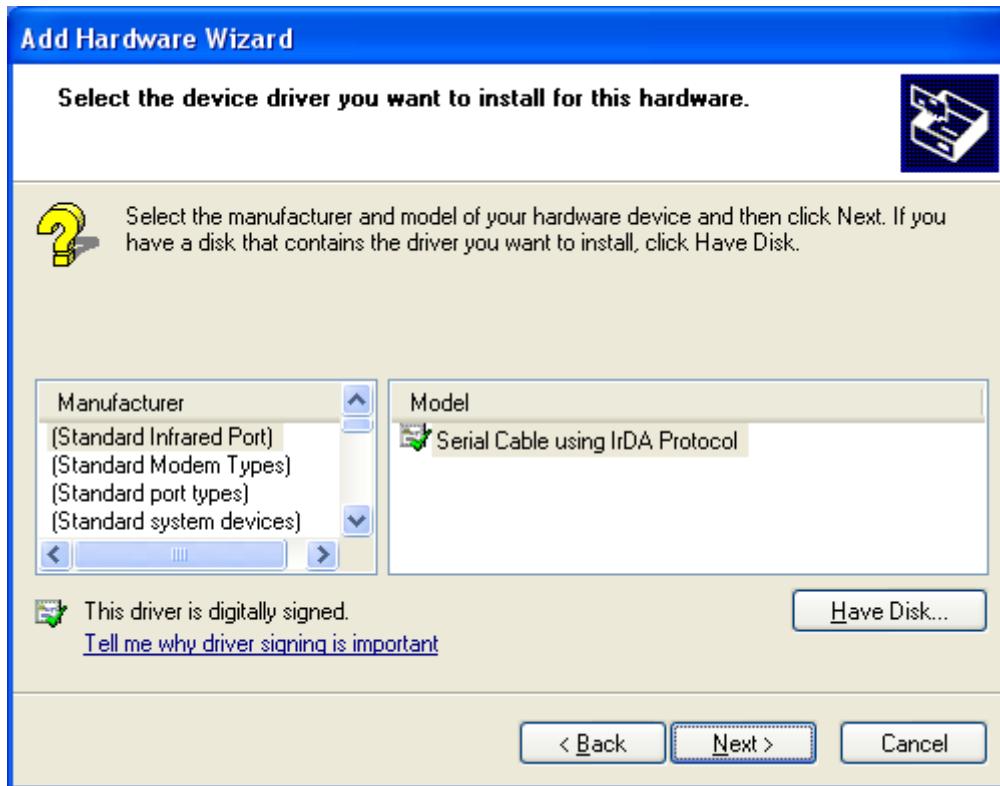

(8) Select **Install the hardware that I manually select from a list (Advanced)** and click **Next** to continue.

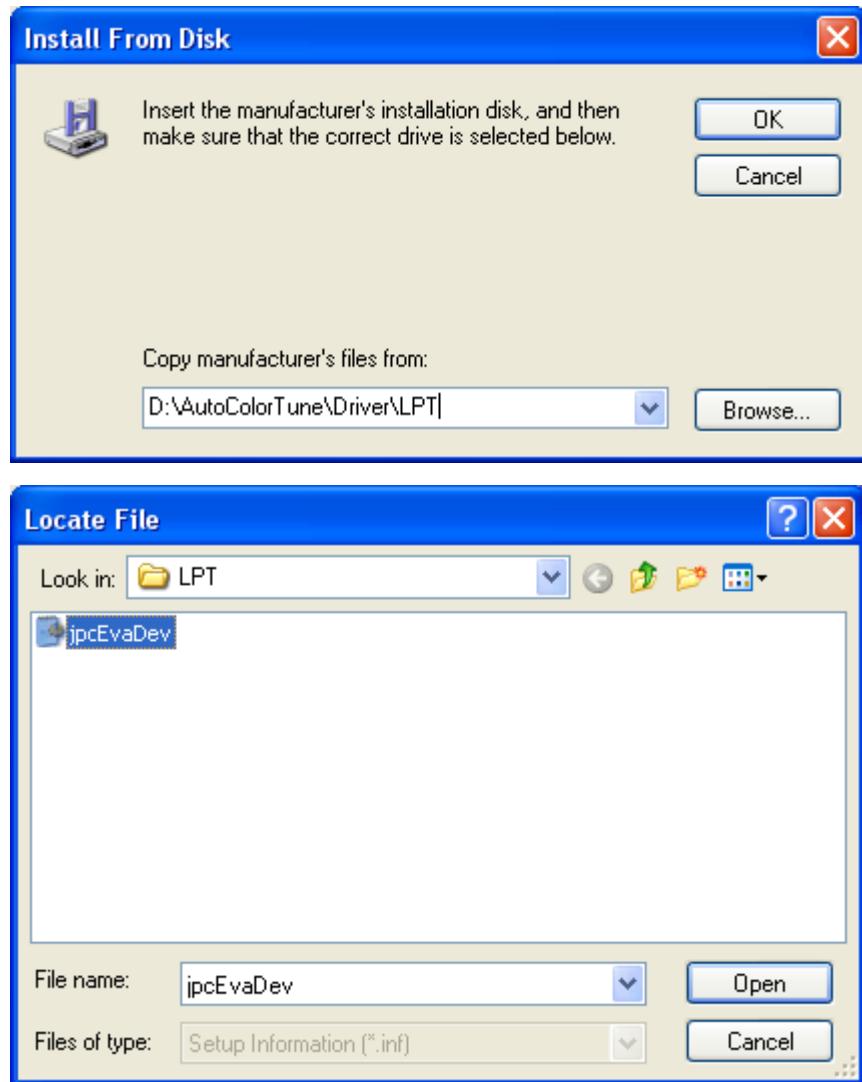

(9) Select **Show All Devices** and click **Next** to continue.

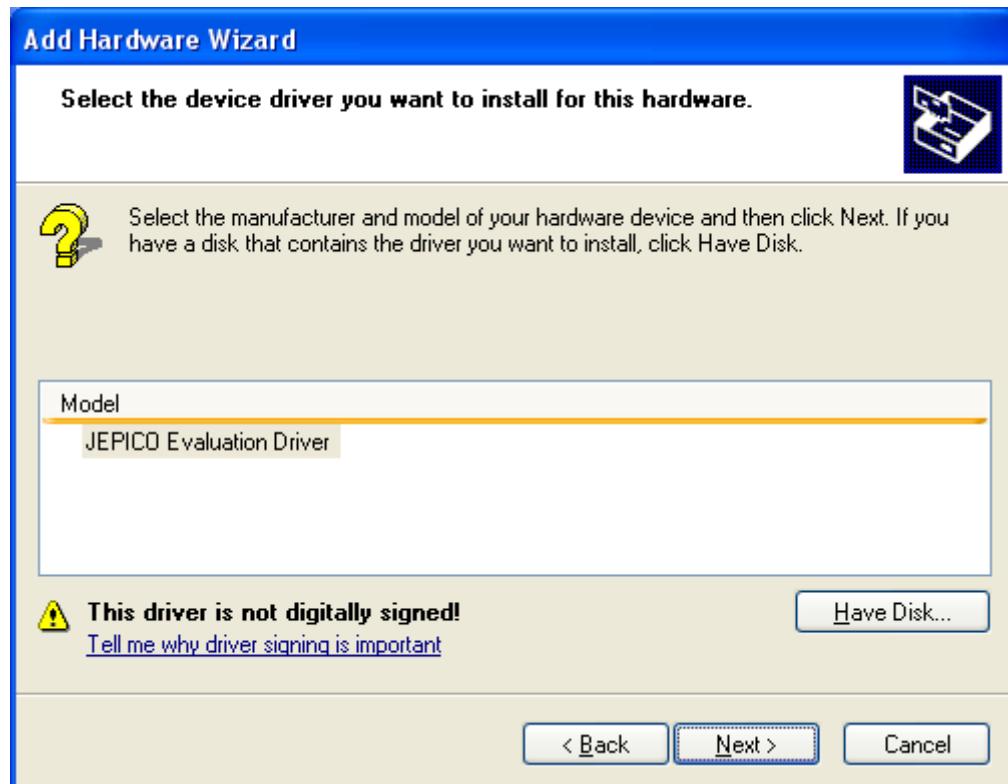

(10) Select **Have Disk**

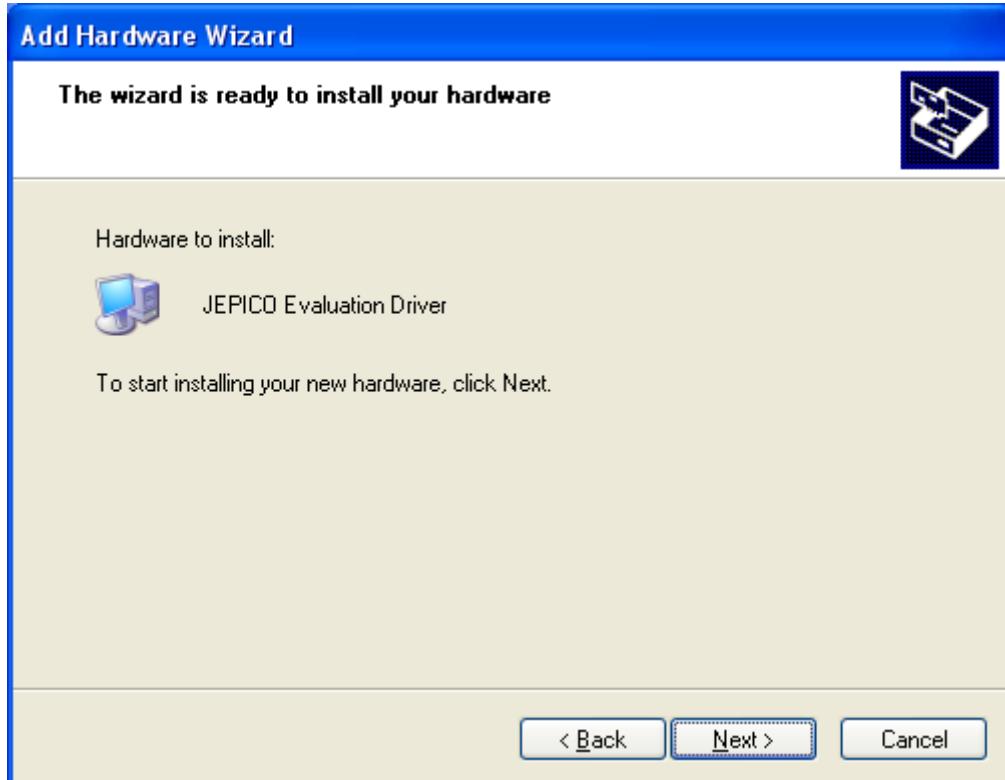

(11) Browse to the **jpcEvaDev.inf** file in the **\Driver \ LPT** directory and click **OK**.

(12) Click **Next** to continue.

(13) Click **Next** to continue.

(14) Click **Finish** in the **Completing the Add Hardware Wizard** dialog.

3. Install MiniFX2 Driver

If you use ROM programmer tool, MiniFX2 Driver installation is not required

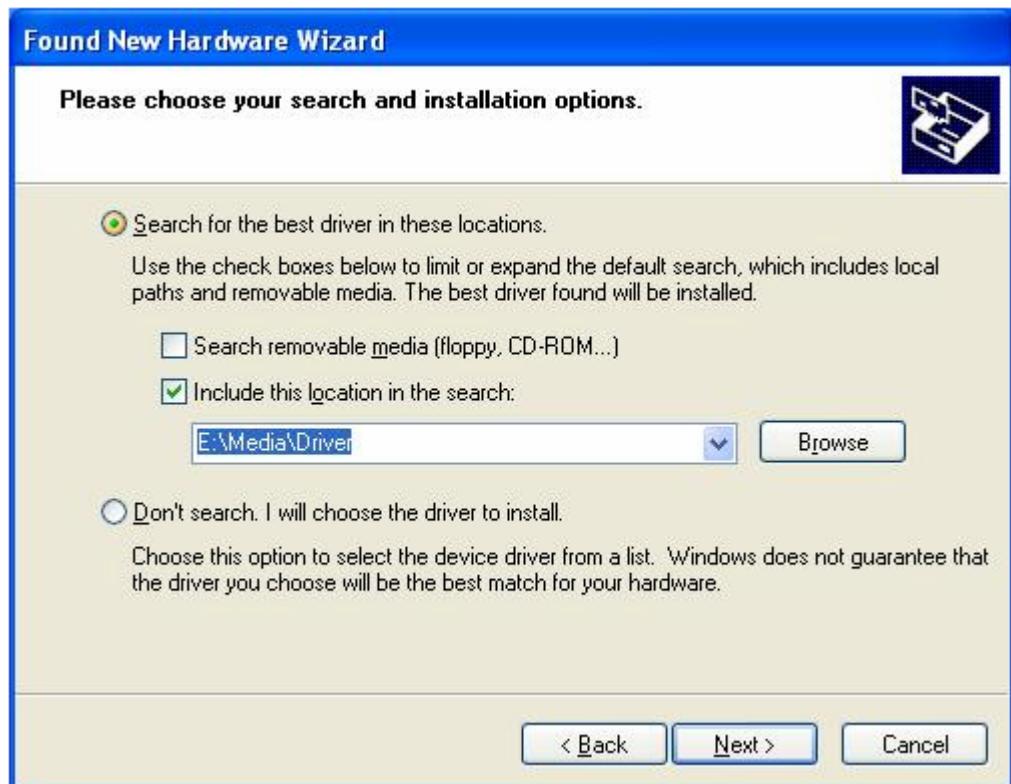

- (1) Connect MiniFX2 Board to the USB Port.
- (2) Select Not, not this time And click Next to continue

- (3) Select Install from a list or specific location[Advanced] And click Next to continue.

(4) Browse to the ezusb.inf file in the ¥Driver¥MiniFX2 directory and click Next to continue.

(5) Click Continue Anyway.

(6)Click Finish in the Completing the New Hardware Wizard dialog.

Operating Procedure

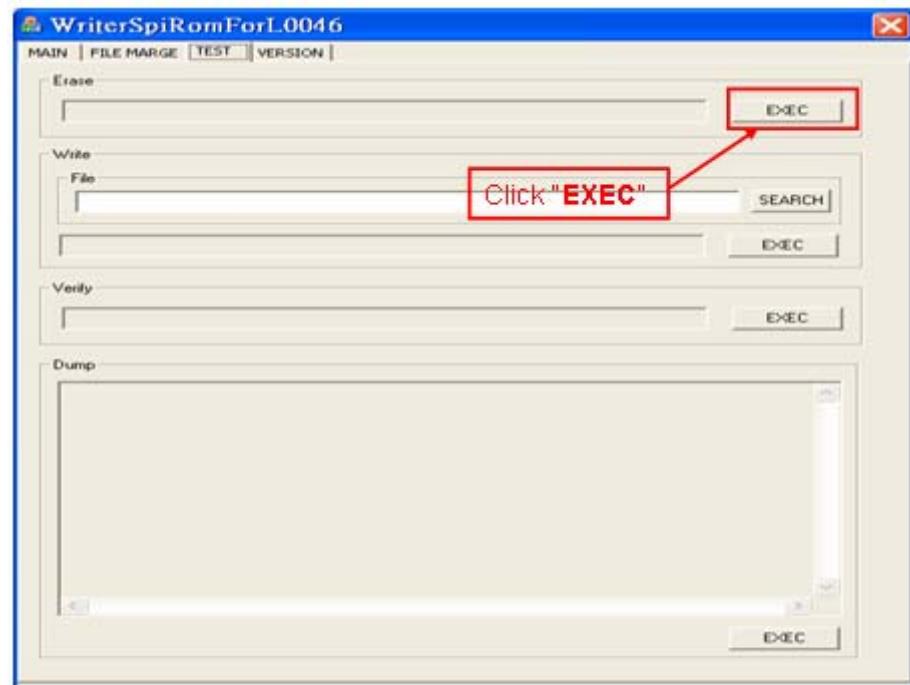

1. Plug the burner board USB port into the PC, Plug the connector cable into RS232 port of the projector.
2. Turn on the projector, Press the direction keypad following the actions below: Up twice, down twice, left once, right once, left once, right once(▲▲▼▼◀▶◀▶),press the MENU button, Enter the engineer mode, Setting PCS[1].
3. Double-click **WriterSpiRomForL0046**.

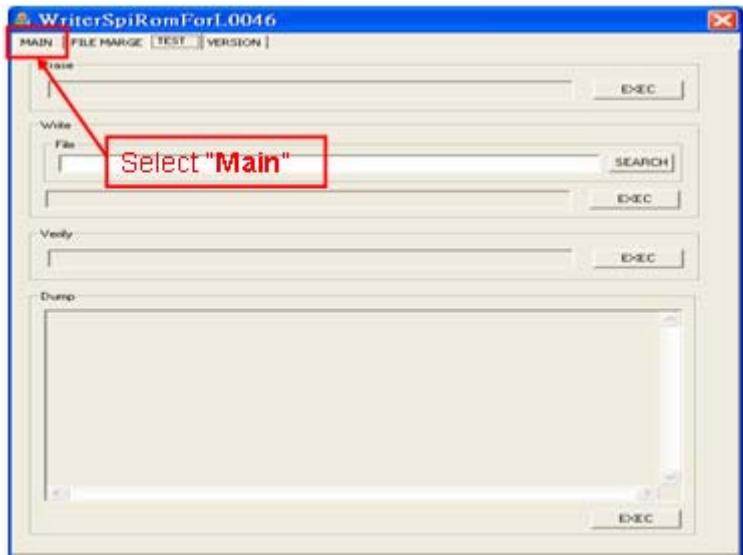

4. Select “TEST”.

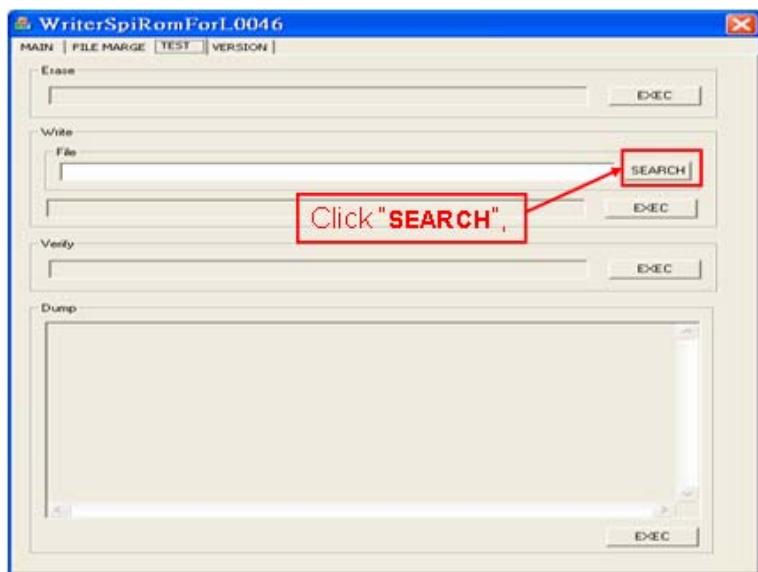

5. Click “EXEC” button.

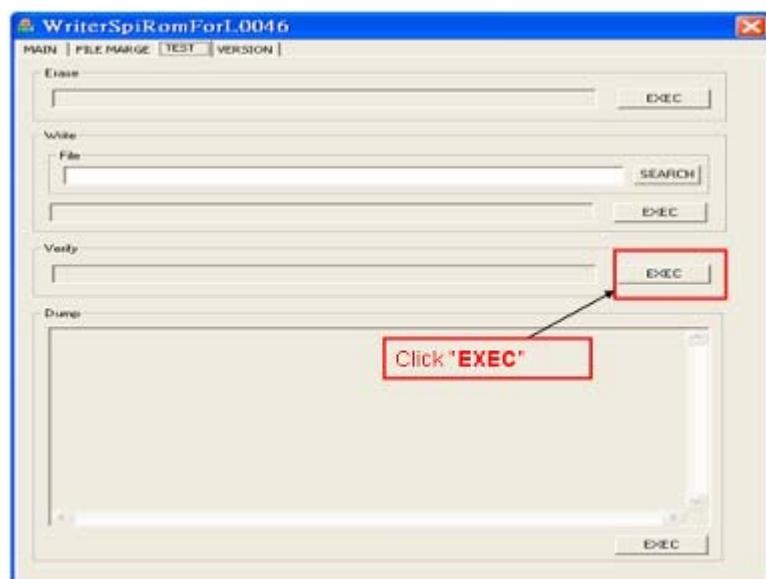

6. Select “MAIN”.

7. Click "SEARCH" button and select file.

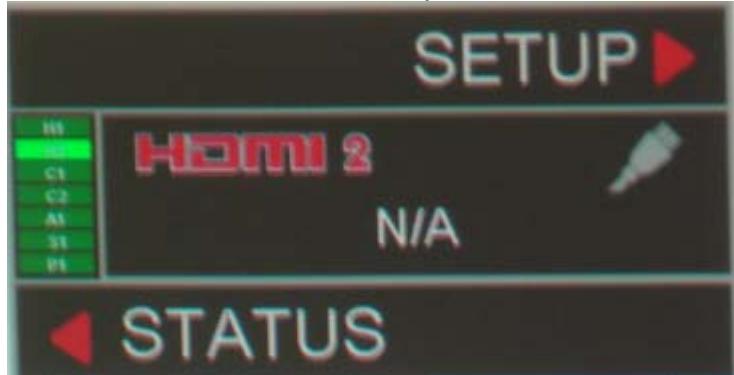

8. Press EXEC button to update the Jepico F/W

How to reset the lamp hours of Pro8100

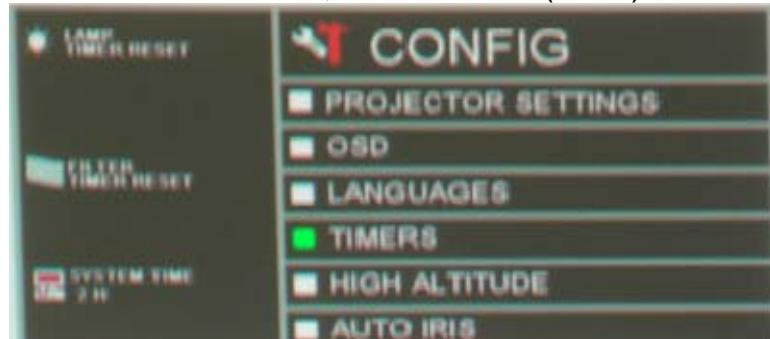

1. Press "Menu" button to open the Main menu

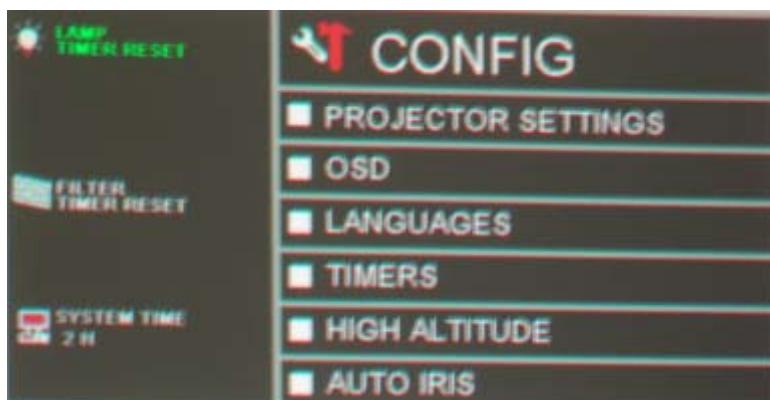

2. Press "Right" button to open this menu

3. Select "CONFIG", Press "←" (Enter) button.

4. Select "TIMERS", Press "←" (Enter) button.

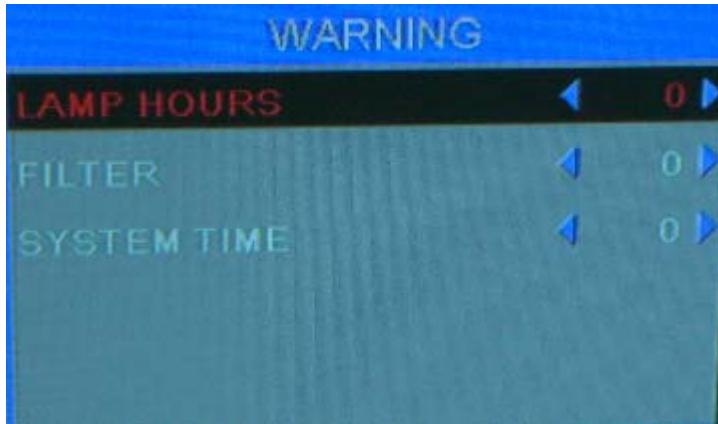

5. Select “LAMP TIMER RESET” ,Press “”(Enter) button.

6. Select “yes”,Press Menu button.
7. Then the lamp hours would be reset to zero.

Service mode

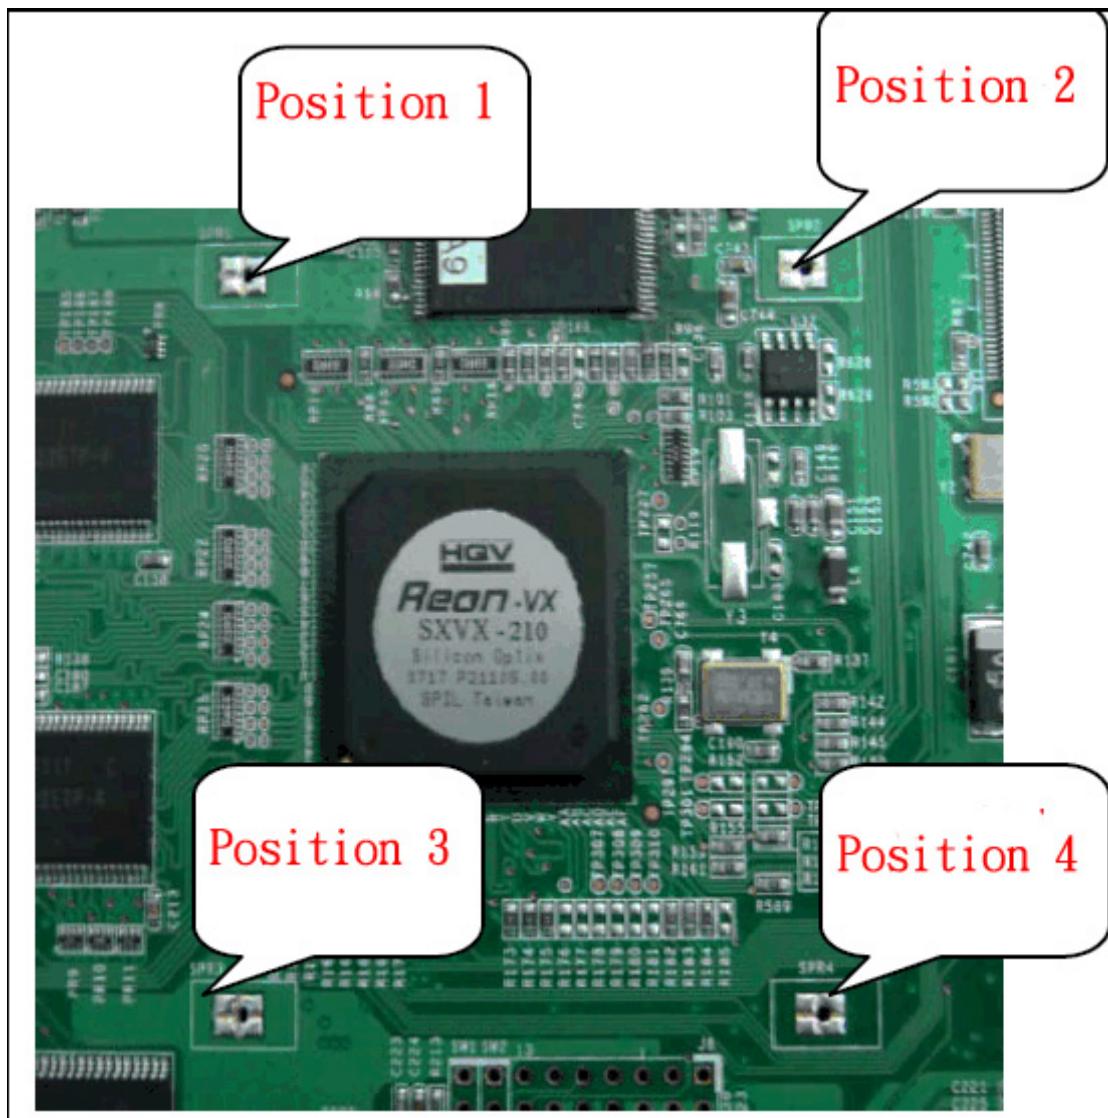

1. Turn on the projector.
2. It can take a minute for the image to achieve full brightness. Press the direction keypad following the actions below: up once, down once, left once, right once; right once; left once, down once, up once($\Delta \nabla \leftarrow \rightarrow \rightarrow \leftarrow \nabla \Delta$), press the **MENU** button.

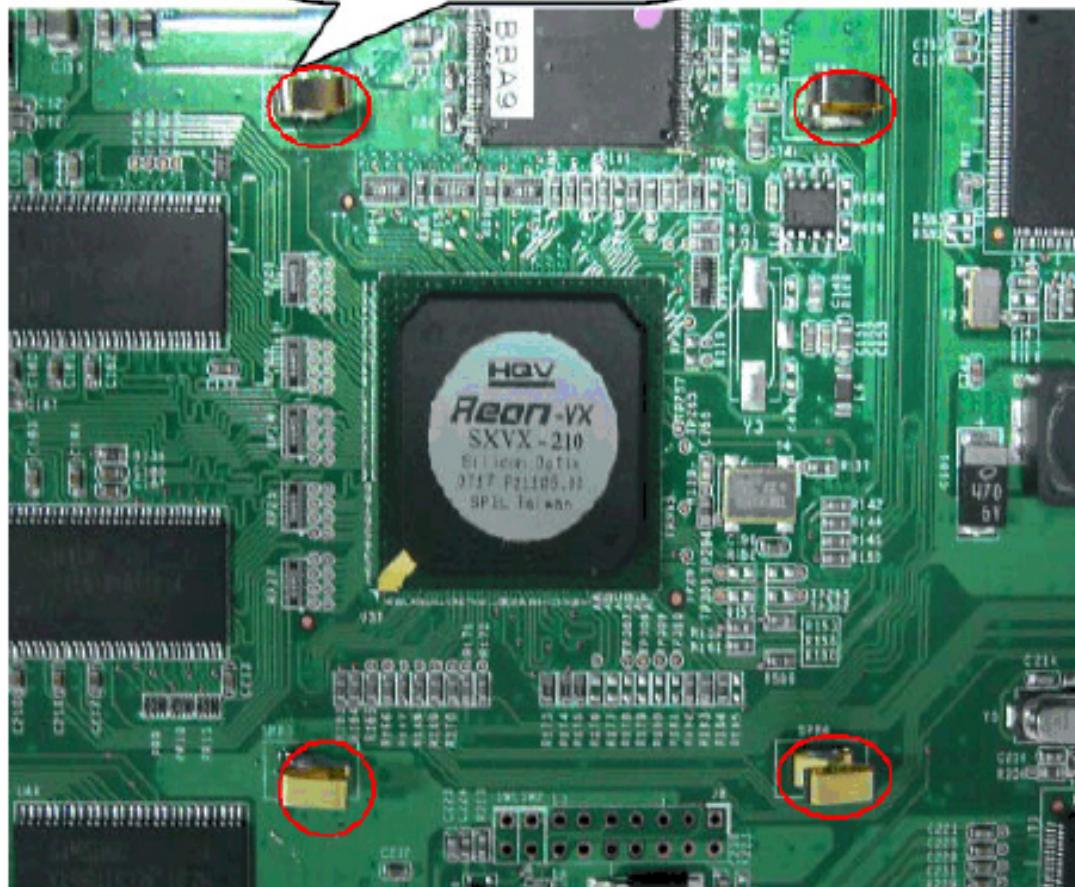

3. Move the color bar to "Lamp reset".
4. Press right button.
5. Then the lamp hours would be reset to zero.

Final solution for “Lock up when first startup the projector”

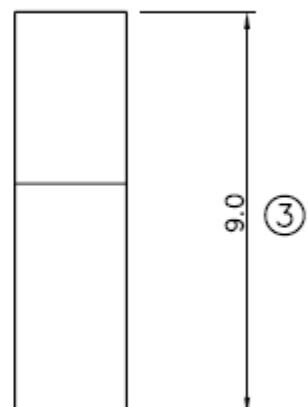

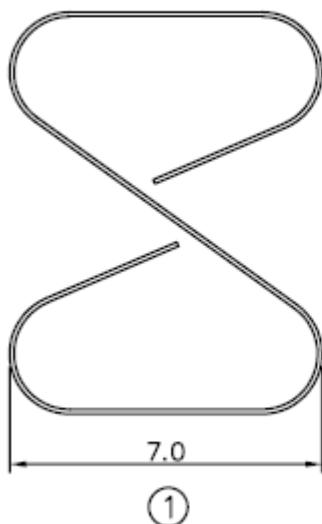

1.If the projector lock up when first startup ,please add four SMD spring(FOXCONN PN:J2349-0040-00) in the main board.

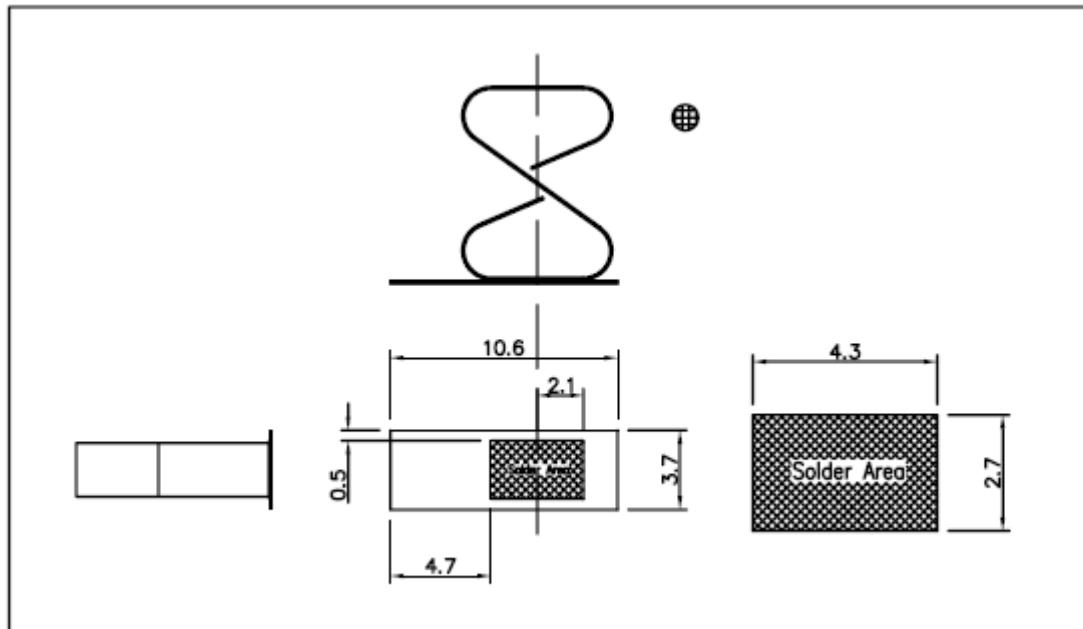

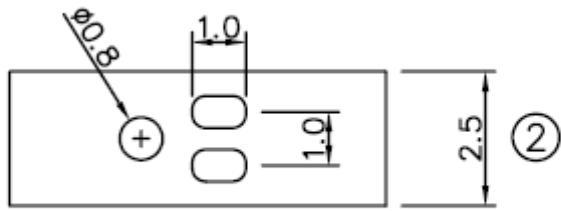

Welding SMD Spring

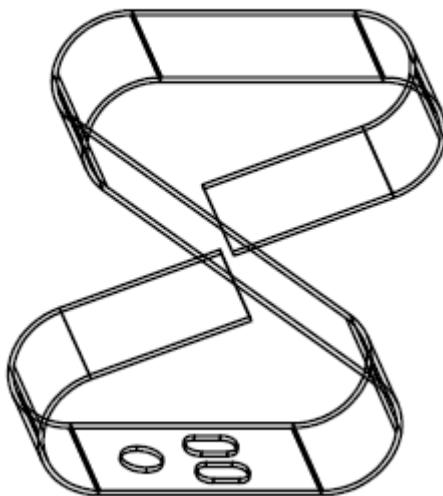

J2349-0040-00 (Model NO:S8-90RCG) Specification for approval

Disassembly Procedure

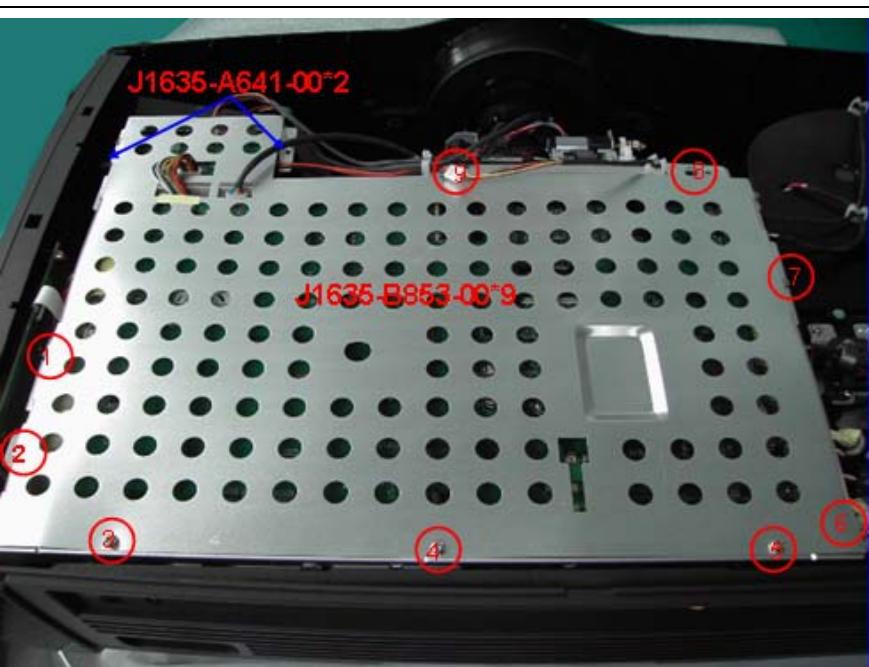

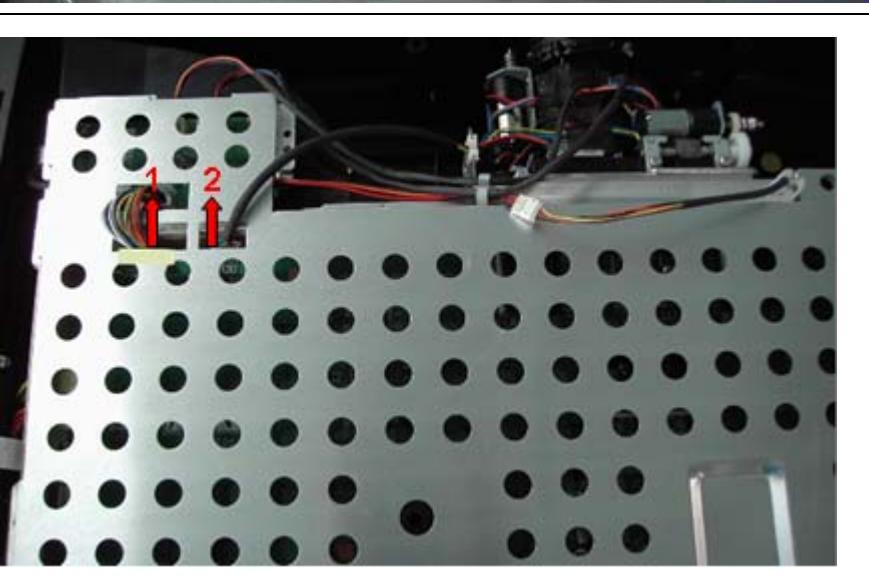

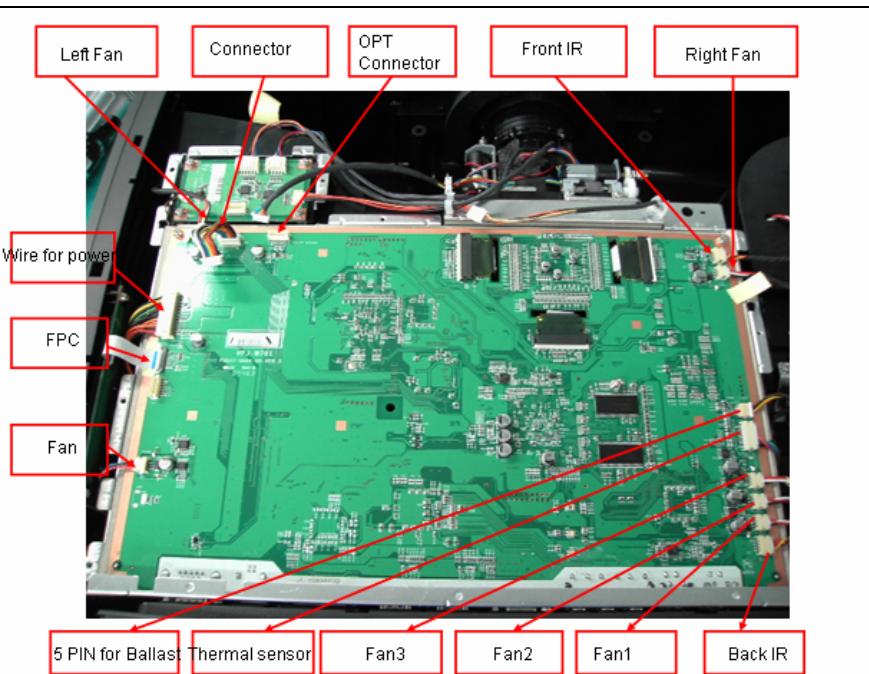

Warning

- ◆ Put on the Static Electricity Ring when starting for repair.
- ◆ Repair Environment suggest in Clean-room class 10000. Do not remove Optical Engine or LCD panel outside the clean room. Please return the optical engine to supplier if your repair condition can not meet the requirement.
- ◆ While screwing or unscrewing screws, please keep the screwdriver straight. Keeping screwdriver inclined will damage the screw holes.
- ◆ Please turn off the power before replacing any parts.
- ◆ Please wait for the projector lamp cooling down and turn off the power before changing it. Never touch or hit the lamp module when replacing the lamp.
- ◆ When you replace the projector lamp, never touch the new lamp with your bare hands. The invisible residue left by the oil on your hands may shorten the lamp life. Use lint-free gloves or finger cots are recommended.

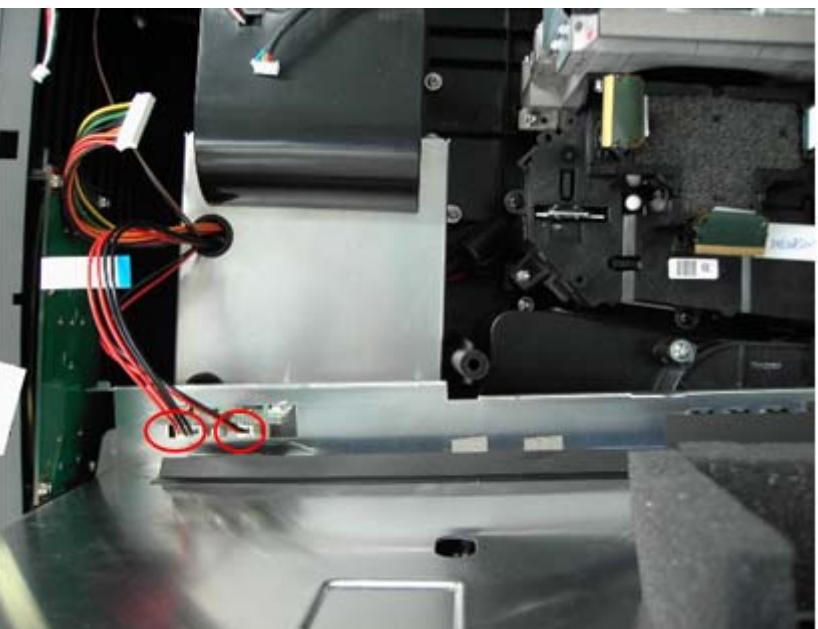

Remove Top cover

Step	Figure	Description
1		<p>Check item:</p> <p>a. Press the power button to shutdown the projector and disconnect the power cord.</p> <p>b. If the lamp is hot, please do not start any procedure until the projector lamp cools down.</p> <p>1. Push the changeable top cover in accordance with the direction of the identification of arrow point, remove the changeable top cover</p>
2		1. Appear this

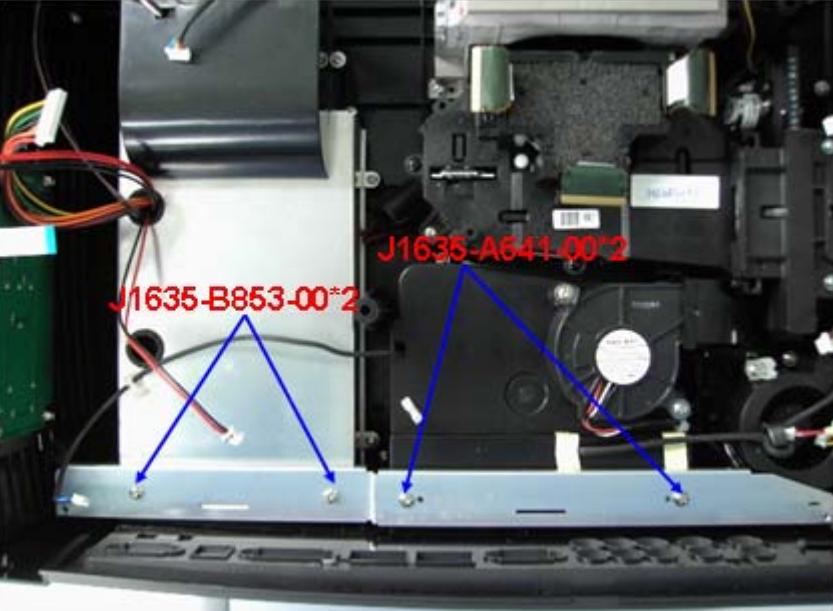

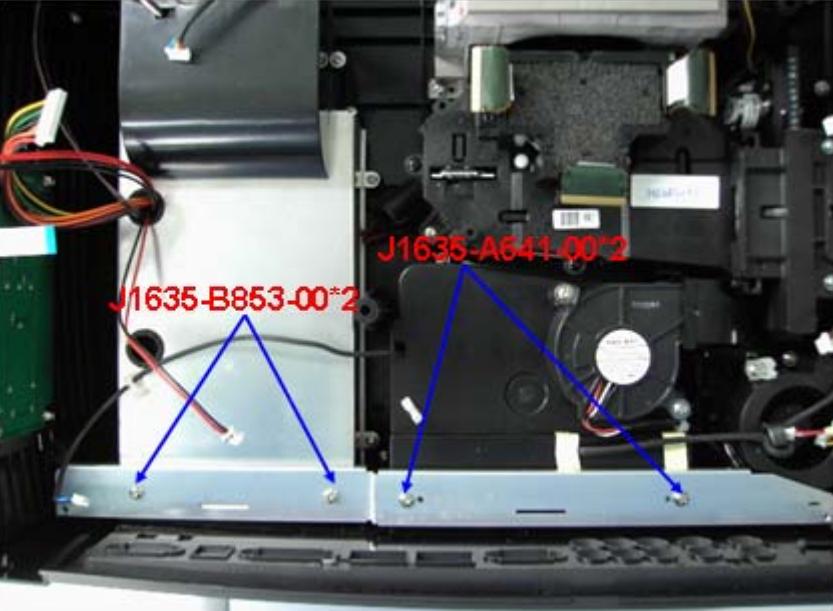

3		<p>Turn the projector over by pulling the latches upward Remove the screws J1635-3680-00*10.</p>
4		<p>1. Remove the screws J1635-A973-00*2 on the back cover</p>
Remove EMI Metal Plate		
5		<p>1. Remove the top cover.</p>

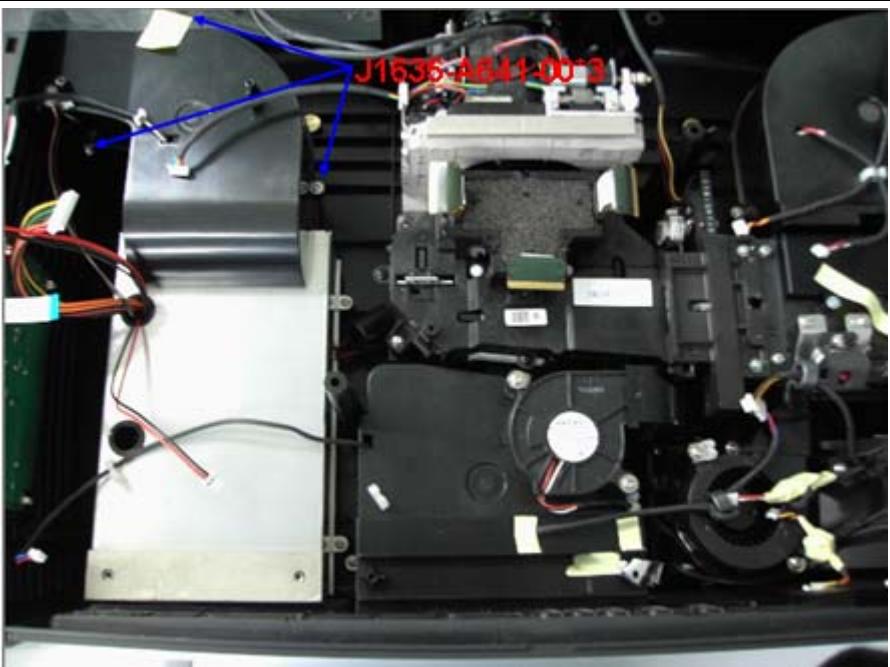

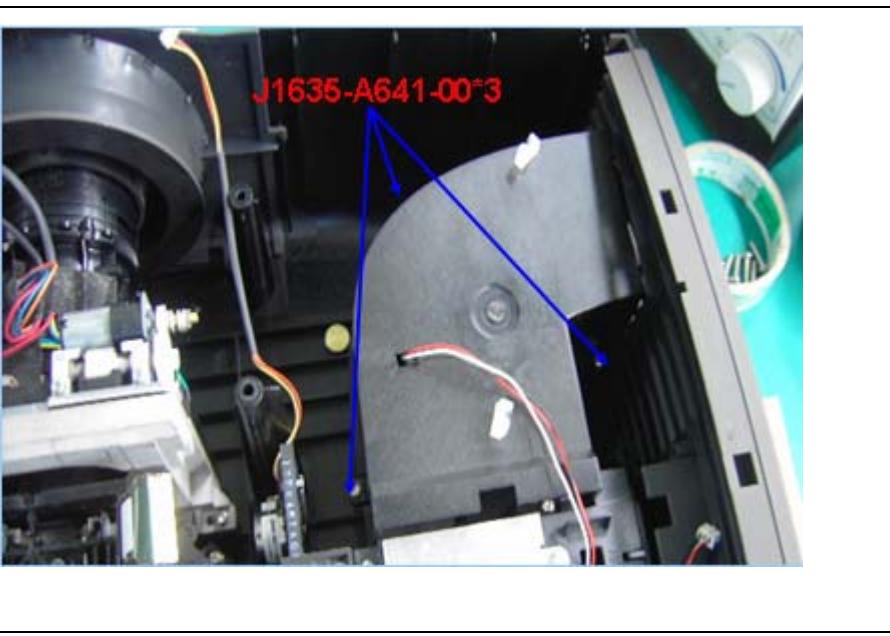

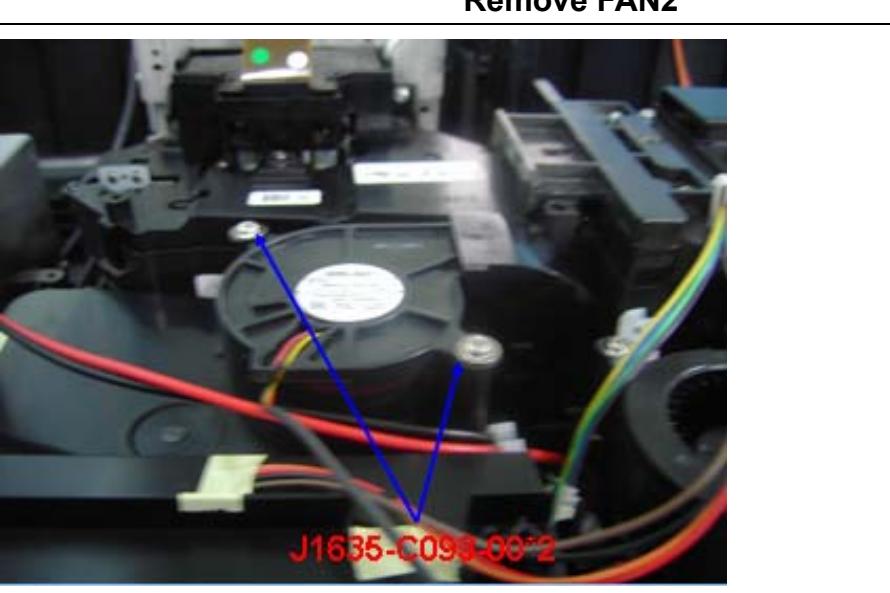

6		<ol style="list-style-type: none"> 1. Remove the screws J1635-A641-00*2 and J1635-B853-00*9. 2. Remove the EMI real metal .
7		<p>Note: Before removed the EMI real metal,you shoule be disconnected wires of mainboard module.</p>
8		<ol style="list-style-type: none"> 1.Show you what the connector should be. 2.Remove all the wires

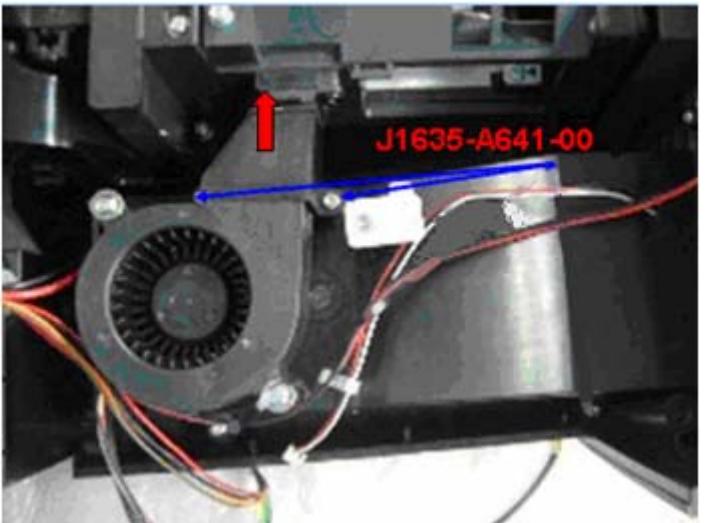

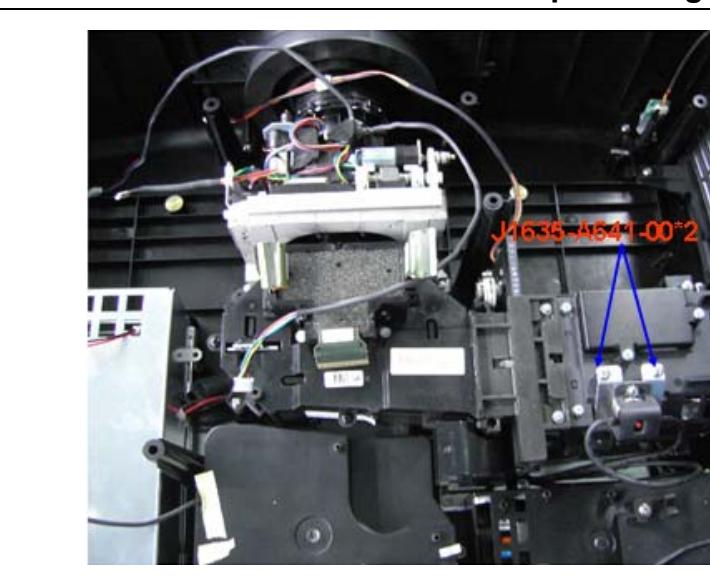

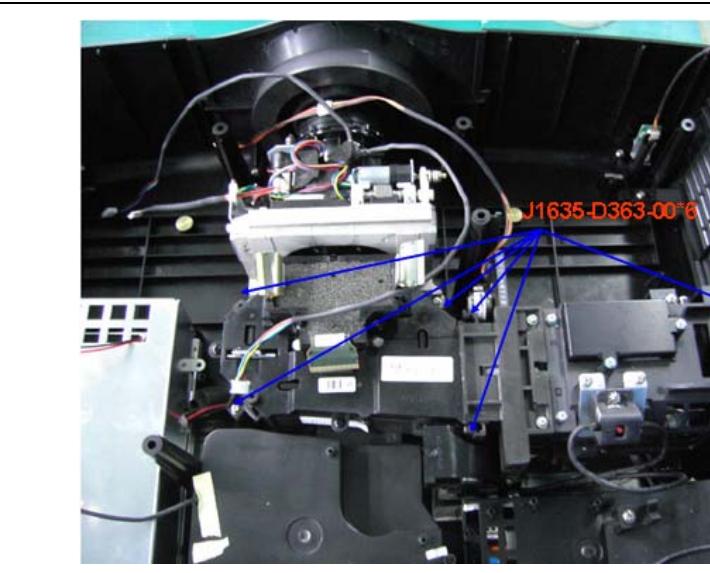

Remove Main Board

		Remove the screws J1635-B853-00*2 .
9		Remove the mainboard module. NOTE:2 wires still have connection under mainboard. Disconnect these two wires before remove mainboard

Remove FAN Housing(fan5,fan6)

		<ol style="list-style-type: none"> 1. Remove the screws J1635-B853-00*2 and J1635-A641-00*2. 2. Remove the sheet link
11		<ol style="list-style-type: none"> 1. Remove the screws J1635-B853-00*2 and J1635-A641-00*2. 2. Remove the sheet link

12	 <p>J1635-A641-00*3</p>	<ol style="list-style-type: none"> 1. Remove the screws J1635-A641-00*3 and then the left fan housing.
13	 <p>J1635-A641-00*3</p>	<ol style="list-style-type: none"> 2. 1. Remove the screws J1635-A641-00*3 and then the right fan housing.
Remove FAN2		
14	 <p>J1635-C093-00*2</p>	<p>Remove the screws J1635-C093-00*2 and then remove fan2</p>

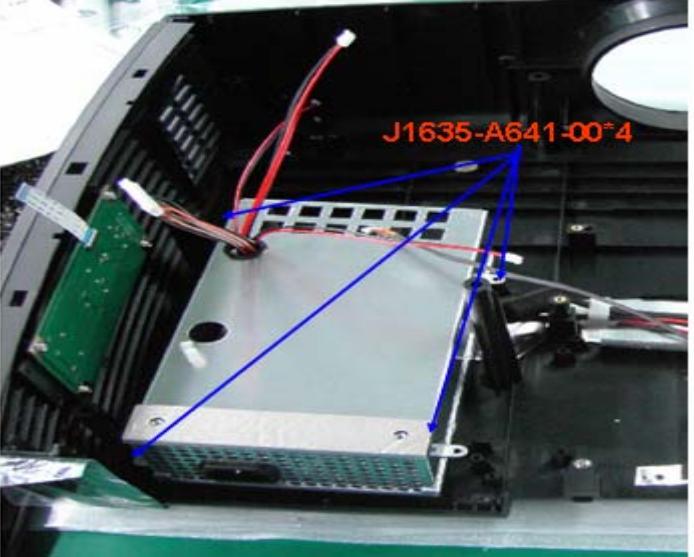

15		Loosen the screws J1635-A641-00*2 to remove ballast hoursing
Remove Optical Engine		
16		Remove the screws J1635-A641-00*2 and then Remove the thermal sensor on the Optical engine.
17		Remove the screws J1635-D363-00*6

		Loosen the screws J1635-A641-00*1 to remove the Optical engine.
18		

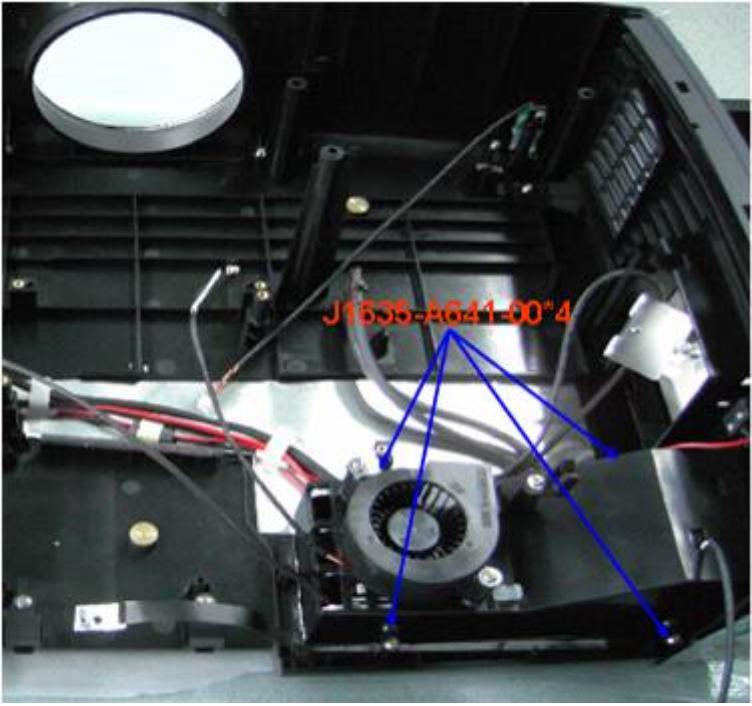

Remove FAN1

		Loosen the screws J1635-A641-00*3 to remove fan cover as shown.
19		
20		Loosen the screws J1635-C093-00*3 to remove the FAN1.

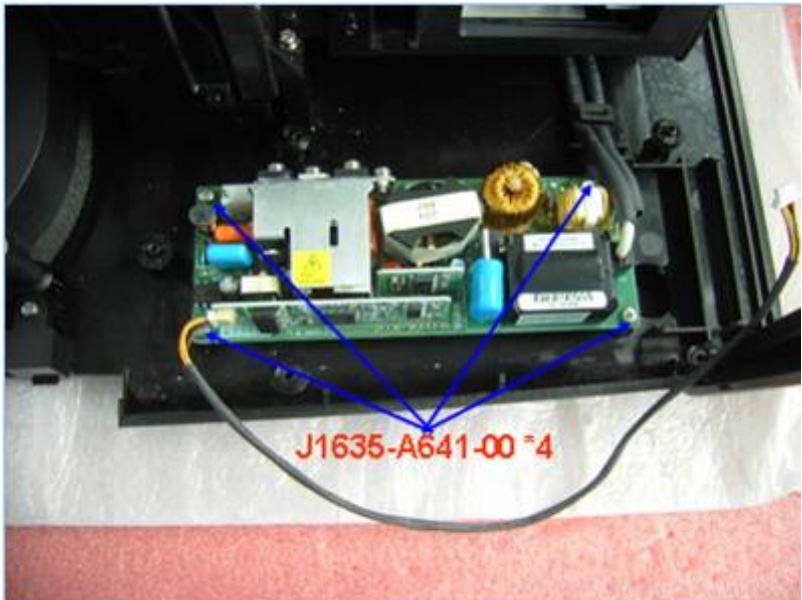

Remove Power board module

21		.Loosen screws J1635-A641-00*4 and remove the power board module from bottom cover
----	--	---

Remove ballast

22		.Loosen screws J1635-A641-00*4 and remove the ballast cover.
----	--	--

23

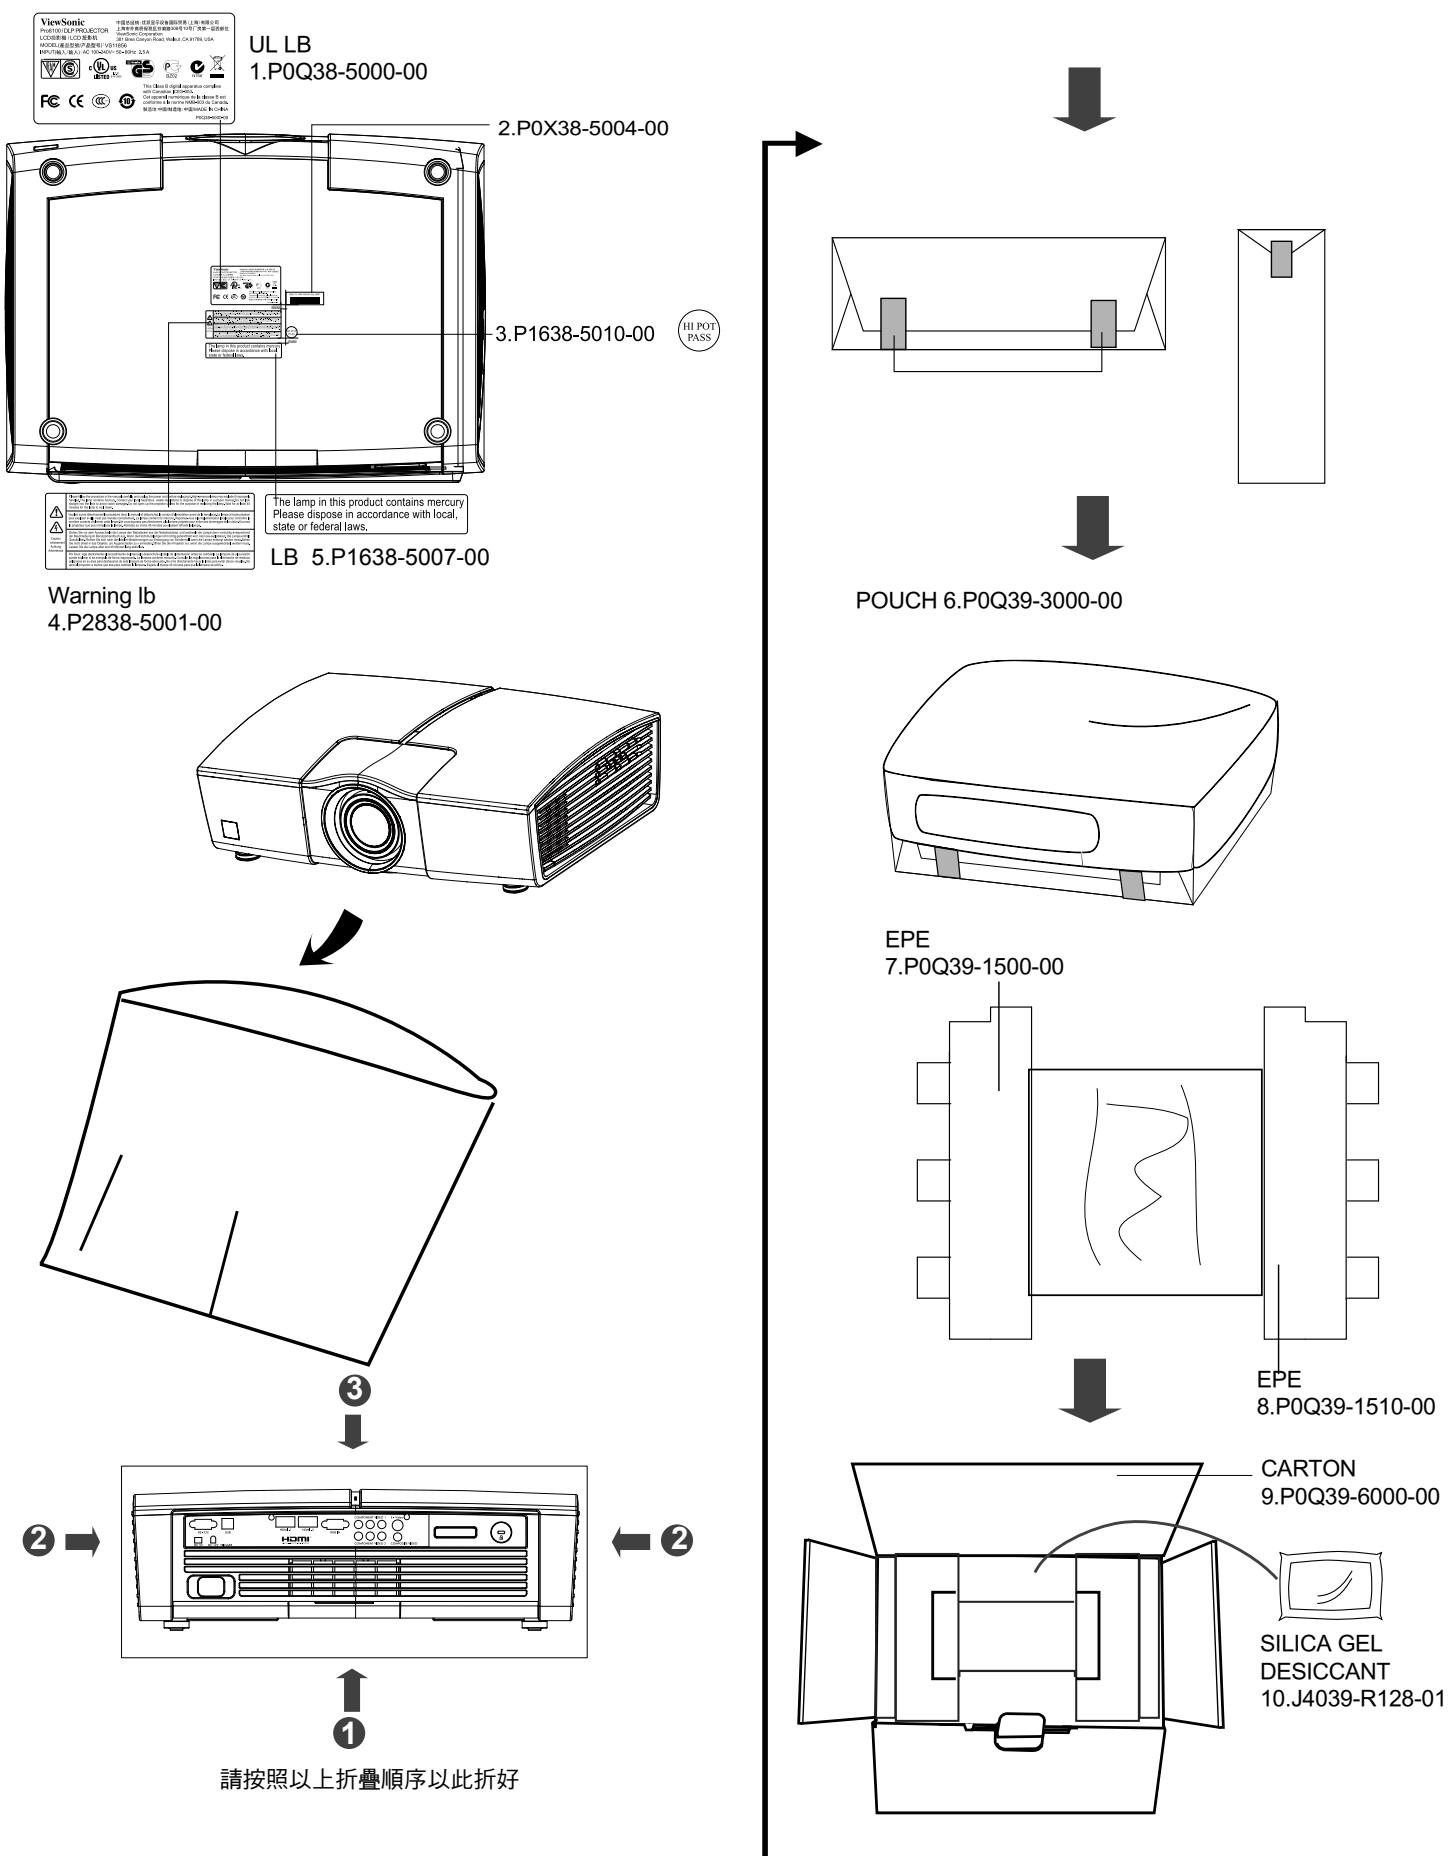

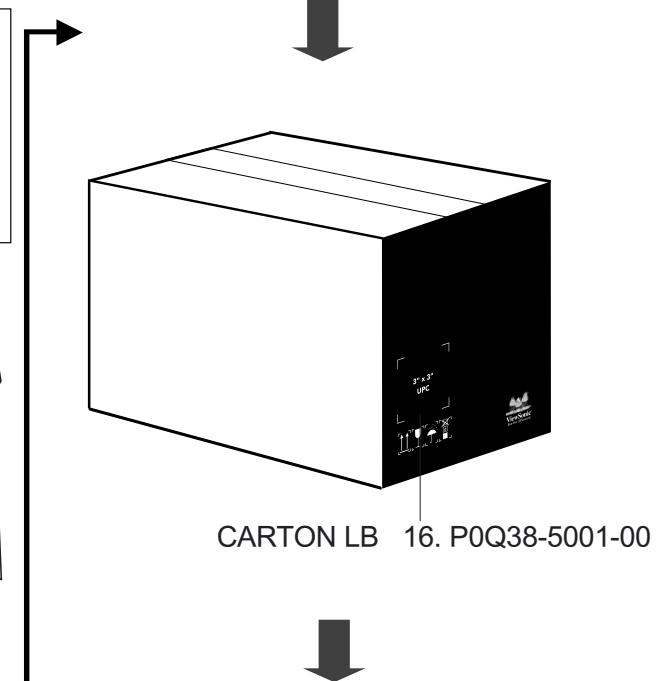

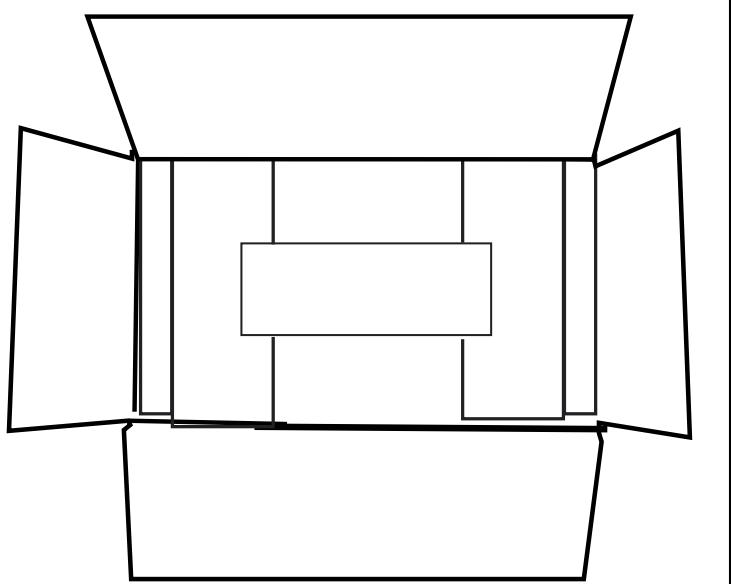

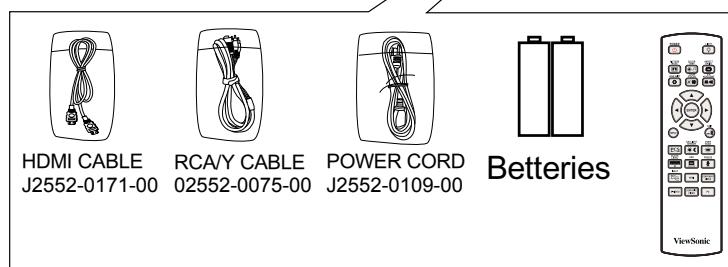

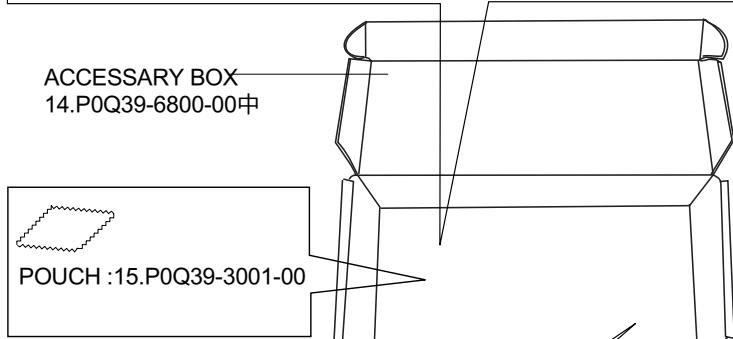

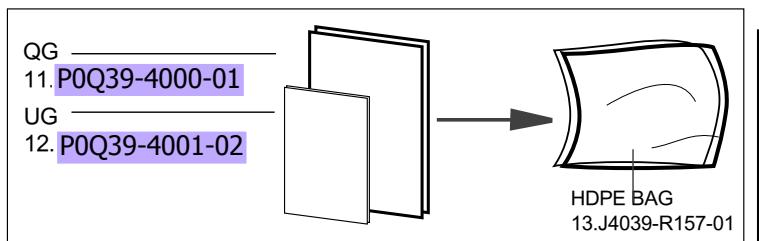

.Loosen screws
J1635-A641-00*4 and
remove the ballast from
bottom cover

Disassembly Lamp Module

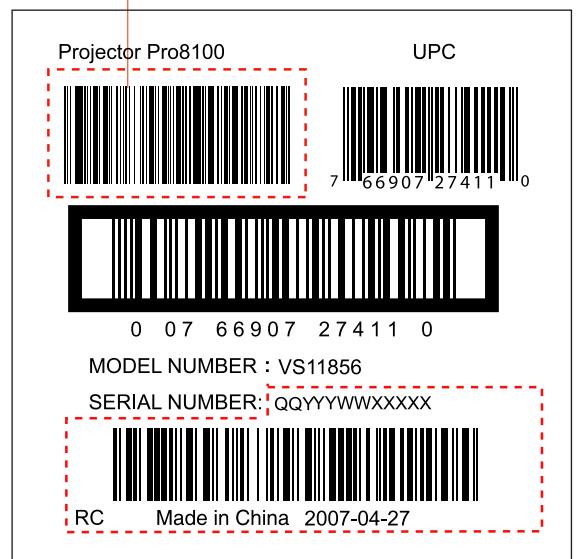

Step	Figure	Description
1		<ul style="list-style-type: none"> ● Loosen the two screws of lamp cover. ● Remove the lamp cover. ● Loosen the two screws of lamp module. ● Pull out the old lamp module by lamp handle. ● Mount the new lamp. ● Replace the lamp cover. ● Reset the lamp timer.

5. Troubleshooting Flow Chart

This chapter provides technicians with electronic background how to maintain the product. Moreover, you can get the appropriate operation to solve some complicated problems of component repairing and professional problems.

Troubleshooting

Warning

- Do not directly look into the lens to avoid eyesight damages.
- The projector is equipped with ventilation holes (intake) and ventilation holes (exhaust). Do not block or place anything near these slots, or internal heat build-up may occur, causing picture degradation or damage to the projector.

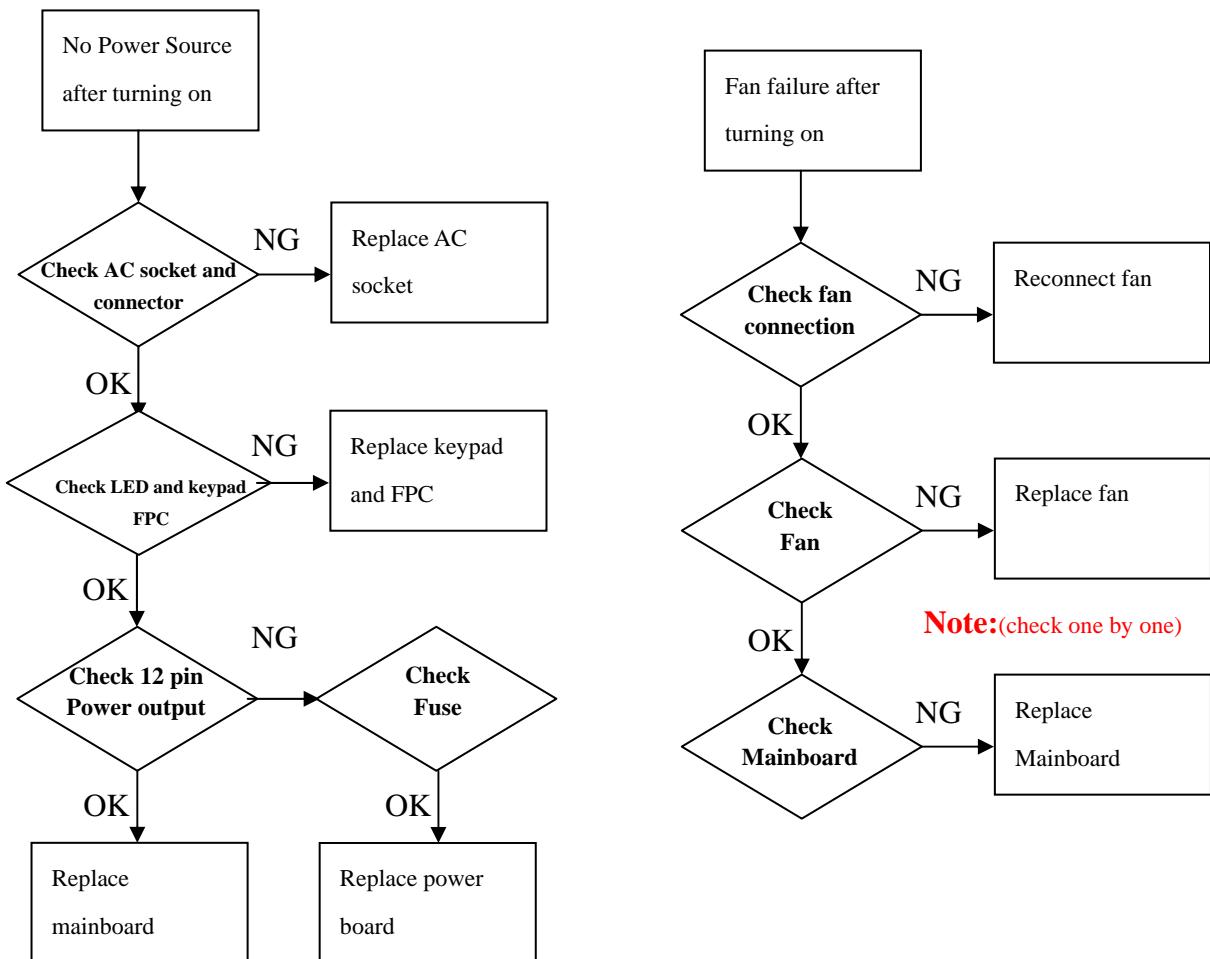

Confirm Software and hardware

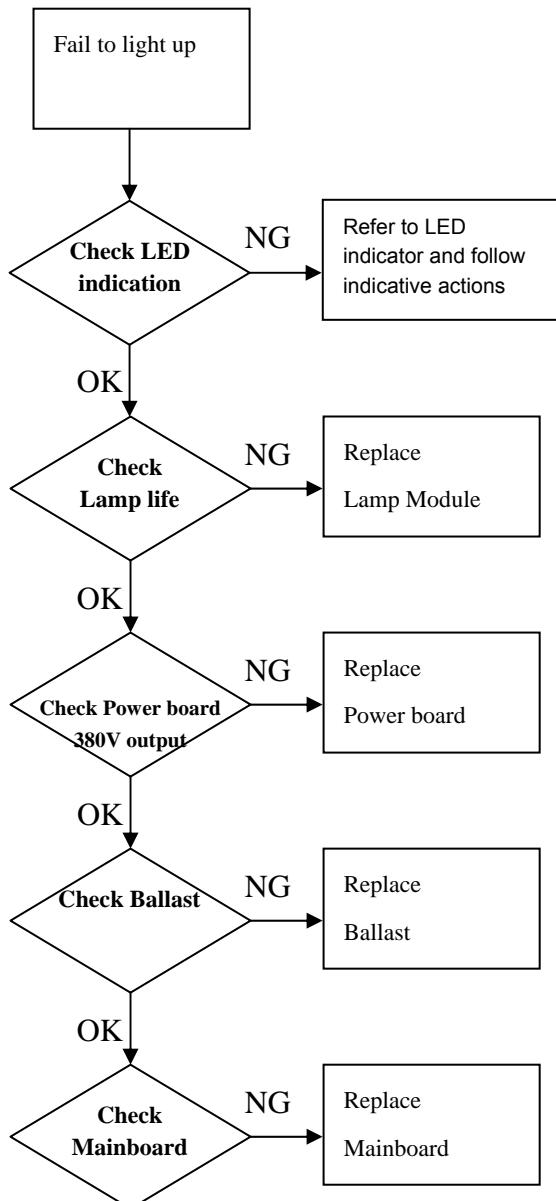

- (1) Confirm FW version and lamp using hours
- (2) Confirm LED indicator

Panel Hardware Controls			
Panel LED	Power LED	Status LED	Indicates
Blinking in Green	Off	Green	Standby mode
Green	Green	Green	Warming up
Green	Off	Green	Projector ON.
Green	Blinking in Green	Green	Cooling down
Orange	Green	Green	In-proper shutdown due to power cut off.
Orange	Off	Red	A certain error has been detected.
Orange	Red	Red	Over temp.
Orange	Blinking in Red	Red	Lamp error.
Orange	Blinking in Orange	Red	Fan error.
Green	Blinking in Orange	Red	It is time to clean the Air filter.
Green	Blinking in Red	Red	Projector overcooled

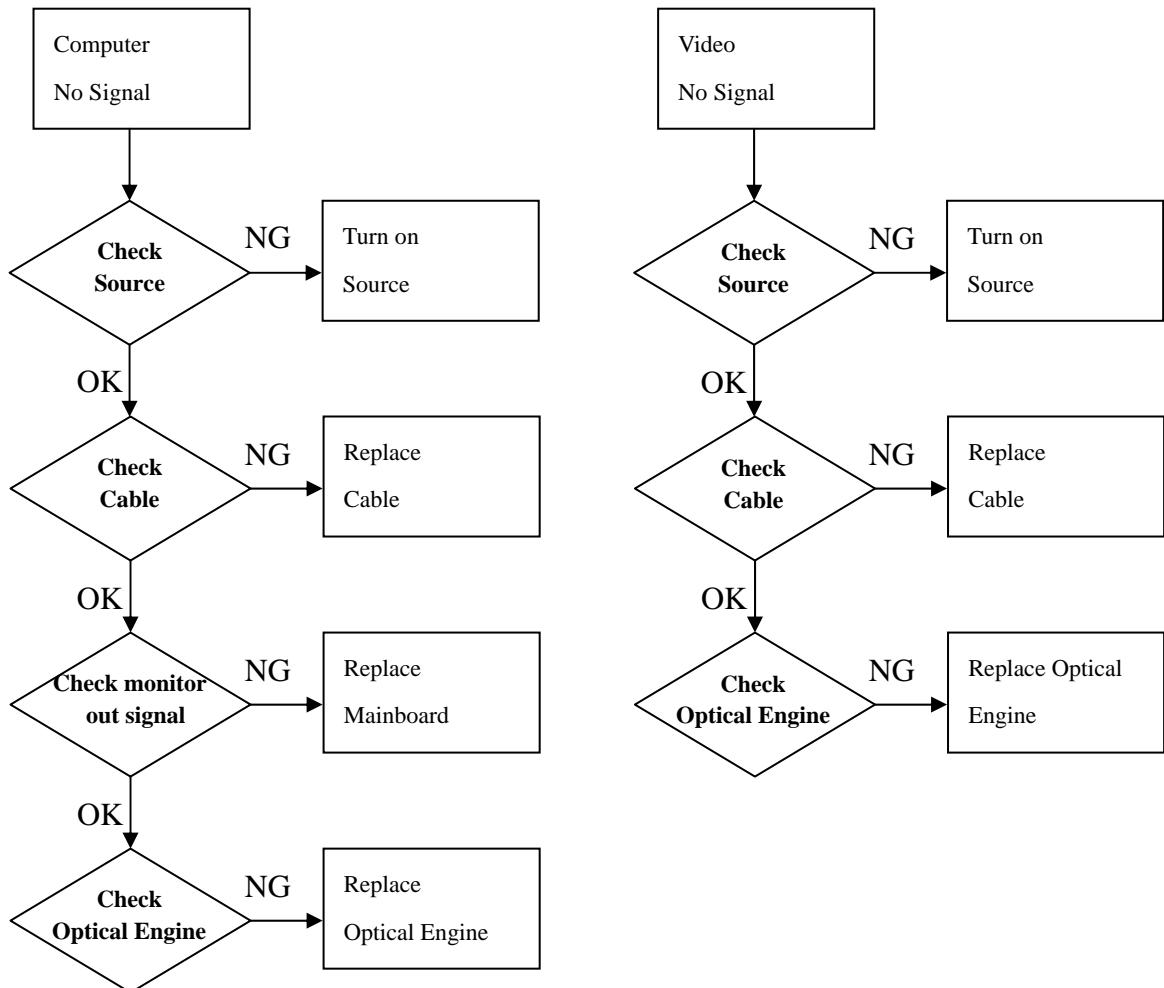

- (3) Confirm cable connection well.

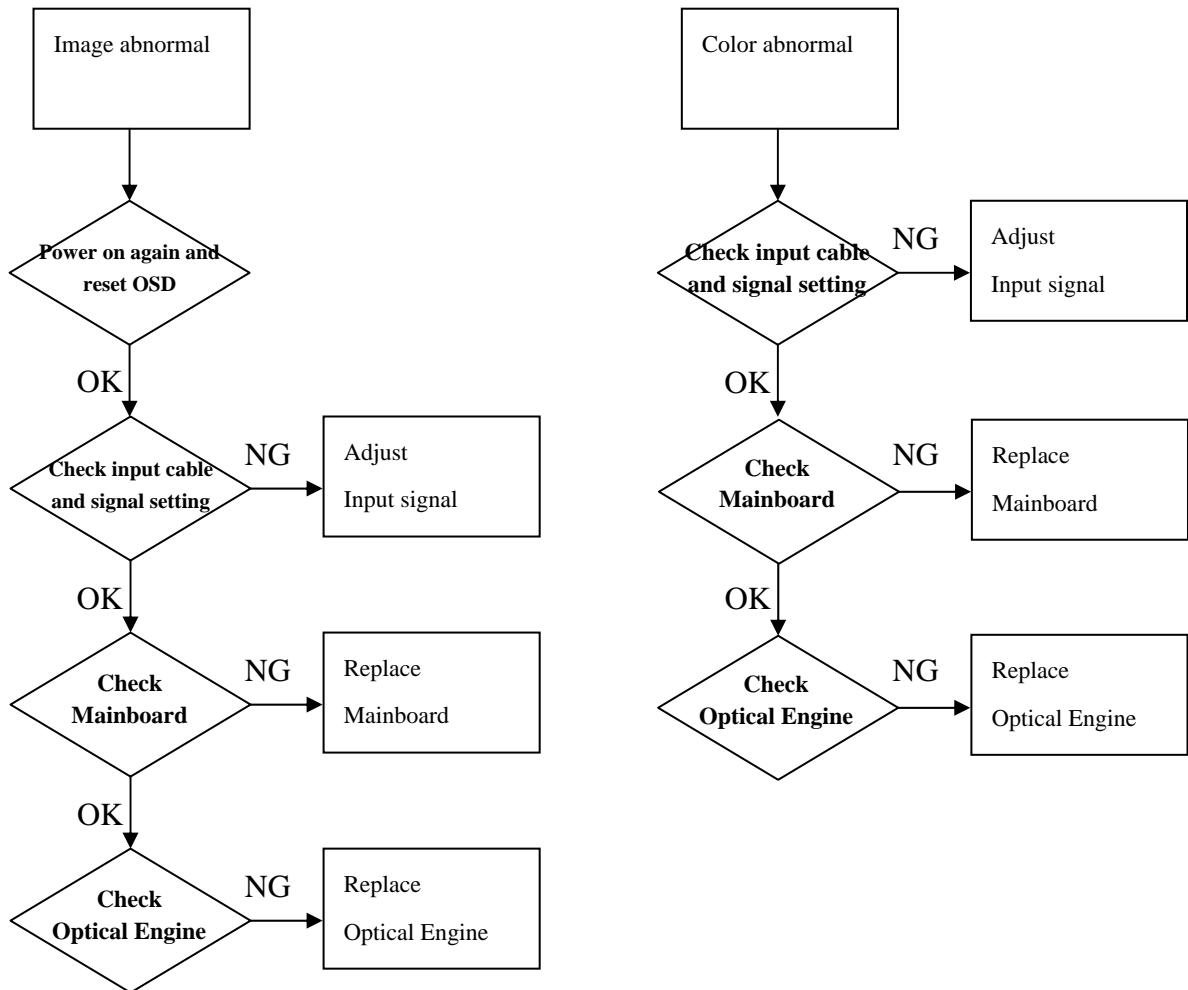

Power Source Troubleshooting:

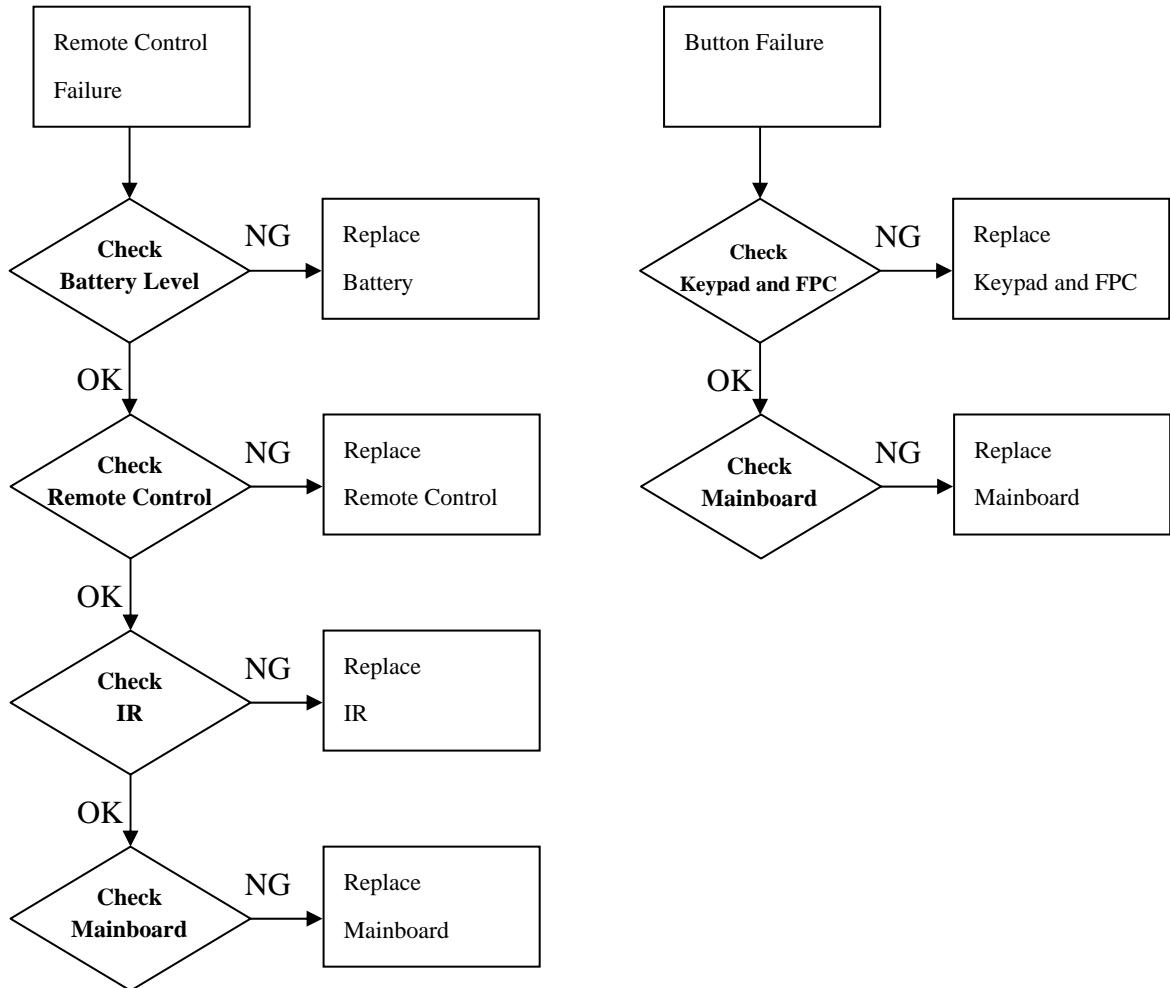

Video Signal Troubleshooting

Operation Function Troubleshooting

Verifying the Repair

After repairing projector (Dissembling and assembling projector), Repair center should verify the quality of repaired unit.

(1) Signal test (Each I/O can function normally)

Connect all connector to the jacks one after the other to check whether each channel can project normally

I/O port	Monitor In
Test Equipment	Standard Pattern generator (Ex. Quantum data)
Signal format	1920*1080 60Hz

I/O port	Video
Test Equipment	Standard Pattern generator (Ex. Quantum data) or DVD player
Signal format	NTSC

I/O port	S-Video
Test Equipment	Standard Pattern generator or DVD player
Signal format	480i

I/O port	USB
Test Equipment	PC and Remote controller
Test method	Connect PC (laptop) VGA output to projector. Set PC (laptop) output signal to projector Connect projector USB to PC. Press remote controller page up/down to scroll presentation file up and down (ex Microsoft office series)

I/O port	HDMI
Test Equipment	Standard Pattern generator or DVD player
Signal format	1080i/p, 720p,

(2) Operation test

Buttons operation

Button description	Test criteria
Power button	1. Mechanical motion (Up & Down) should be free from getting stuck when pressing the button 2. Press “power” button and projector will switch on
Enter	1. Mechanical motion (Up & Down) should be free from getting stuck when pressing the button. 2. Press Enter button can To confirm selected menu item.
4-way button	1. Mechanical motion (Up & Down) should be free from getting stuck when pressing the 4-way button. 2. Use four directional buttons to select items or make adjustments to your selections.
Source	Manually selects an input source.
Lens Shift	Motorized vertical and horizontal lens shift for positioning display image without physically moving the unit.
Menu/Exit	Opens and Exits the on-screen menu

Foot adjuster operation

Foot adjuster.	Test criteria
Foot adjuster button	Foot adjusters should stretch downward smoothly by pressing the foot adjuster buttons on the two sides

Zoom ring and Focus ring

Ring	Test criteria
Zoom ring	Mechanical motion (Up & Down) should be free from getting stuck when pressing the button. Press “Zoom” button should be free from getting stuck.
Focus ring	Mechanical motion (Up & Down) should be free from getting stuck when pressing the button. Press “focus” button should free from seizing.

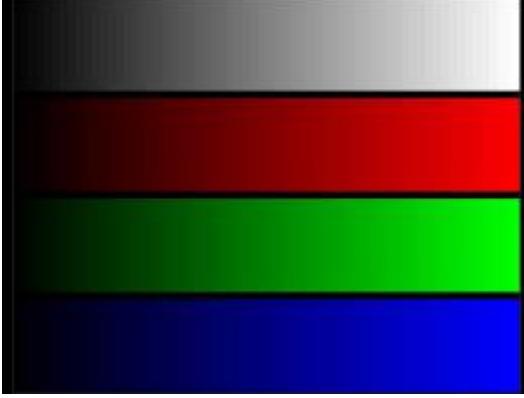

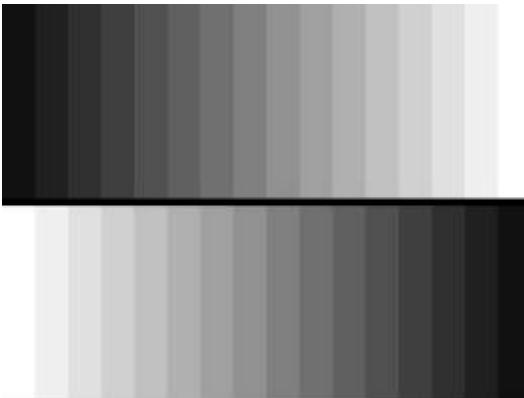

(3) Image Quality

Projected image size: 60 inches (diagonal length)

Zoom ring: Adjust zoom ring to wide (Maximum projection size)

VGA

I/O port	Monitor In (WXGA)
Test Equipment	Standard Pattern generator (Ex. Quantum data)
Signal format	1920*1080 60Hz
Projected image size	60" in diagonal length

Test Pattern	Test criteria
	Full white Apparent color strip, bend and streak corner on the projected image are not allowable
	256 level RGB -- 256 level of RGB color should be distinguishable, at least Red color scales should be. -- For each RGB 256 levels, Noise or color deviation in R, G, and B single level respectively are acceptable.
	16 gray level -- 16 level of gray level color should be distinguishable -- When Gamma selected to "RGB" Not distinguishable of 2 brightest levels /2 darkest levels are acceptable.

	Gray 10 Blemish, stain are not allowable on the projected screen
	Full darkness Light leak in the non-effective area. Should be less than 0.7 lux(<0.7lux)

S-Video

I/O port	S-Video
Test Equipment	Standard Pattern generator (Ex. Quantum data)&DVD player
Signal format	480i
Criteria	No apparent color deviation on the projected image

Video

I/O port	Video
Test Equipment	Standard Pattern generator (Ex. Quantum data)&DVD player
Criteria	No apparent color deviation on the projected image

(4) Resolution

I/O port	1960*1280
Test Equipment	PC
Test Method	<ol style="list-style-type: none"> 1. Rotate Zoom ring to wide mode (Maximum projected image) 2. Fix projector to set diagonal length of projected image to 60". 3. Adjust focus ring to make resolution of 4 corners and center are balanced. 4. Check he characters should be recognized easily. 5. Rotate Zoom ring to tele mode (Minimum projected image) 6. Adjust focus ring to make resolution of 4 corners and center are balanced. 7. Check the characters should be recognized easily.

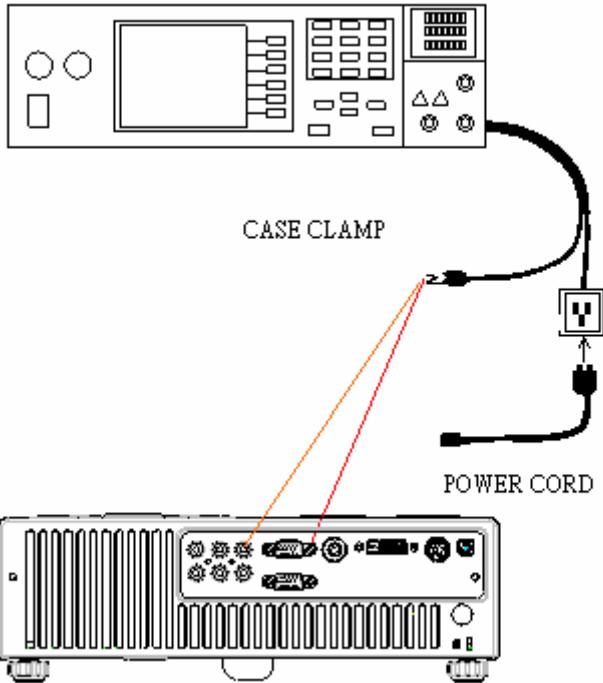

(5) Front and Rear infrared sensor

Device	Front and Rear infrared
Test Equipment	Remote controller
Test method	<ol style="list-style-type: none"> 1. Cover front sensor and operate remote controller to test rear sensor 2. Cover rear sensor and operate remote controller to test front sensor

(6) Brightness measurements

Test items	Brightness measurements
Test Equipment	Chroma automatic system (The alternative is CL-200)
Test method	Measure 9 points
Criteria	Marketing spec 20% off

(7) Safety test equipments

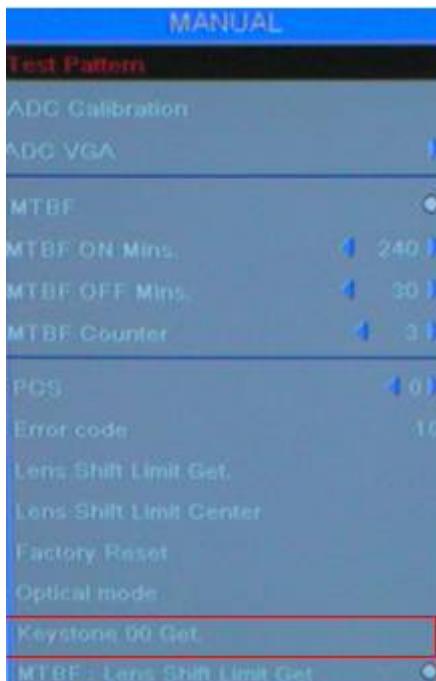

Test items	Safety test
Test Equipment	Safety analyzer
Test method	<ol style="list-style-type: none"> 1. Clamp the metal shell of VGA connector 2. Plug the power cord to socket 
Test criteria	<p>GND 30A 3sec 100mΩ</p> <p>DCW 2506V 1sec 250uA</p> <p>Single Step OFF</p>

(8) Cosmetic standard for repaired projector

Follow cosmetic standard for repair center.

(9) Keystone calibration procedures

1. Put the projector onto a platform, and make sure the projector feet are all adjusted close to the Bottom cover maximumly and steadily.
2. turn on the projector.
3. It can take a minute for the image to achieve full brightness. Press the direction keypad following the actions below:
Up twice, down twice, left once, right once, left once, right once($\blacktriangle\blacktriangle\blacktriangledown\blacktriangledown\blackleftarrow\blackrightarrow\blackleftarrow\blackrightarrow$), press the MENU button, Enter the engineer mode.
4. Move down the color bar to "Keystone 00 Get" item, Press "enter" button. Keystone calibration procedures completely.

(10) ADC adjustment

The ADC Calibration adjustment must use the dedicated device: Pattern Generator- Quantum Data 802B.

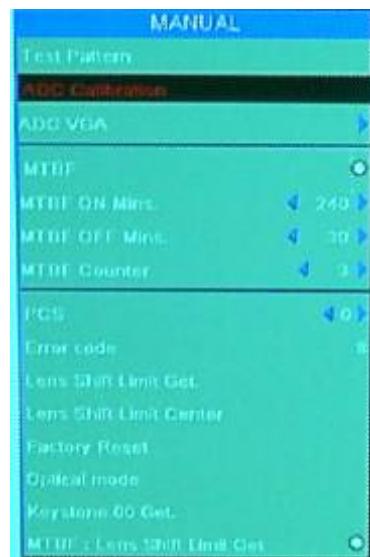

1. Turn on the power then connect the PC signal cable. Set the generator format as DMT1060, image as "W100B0", as below.

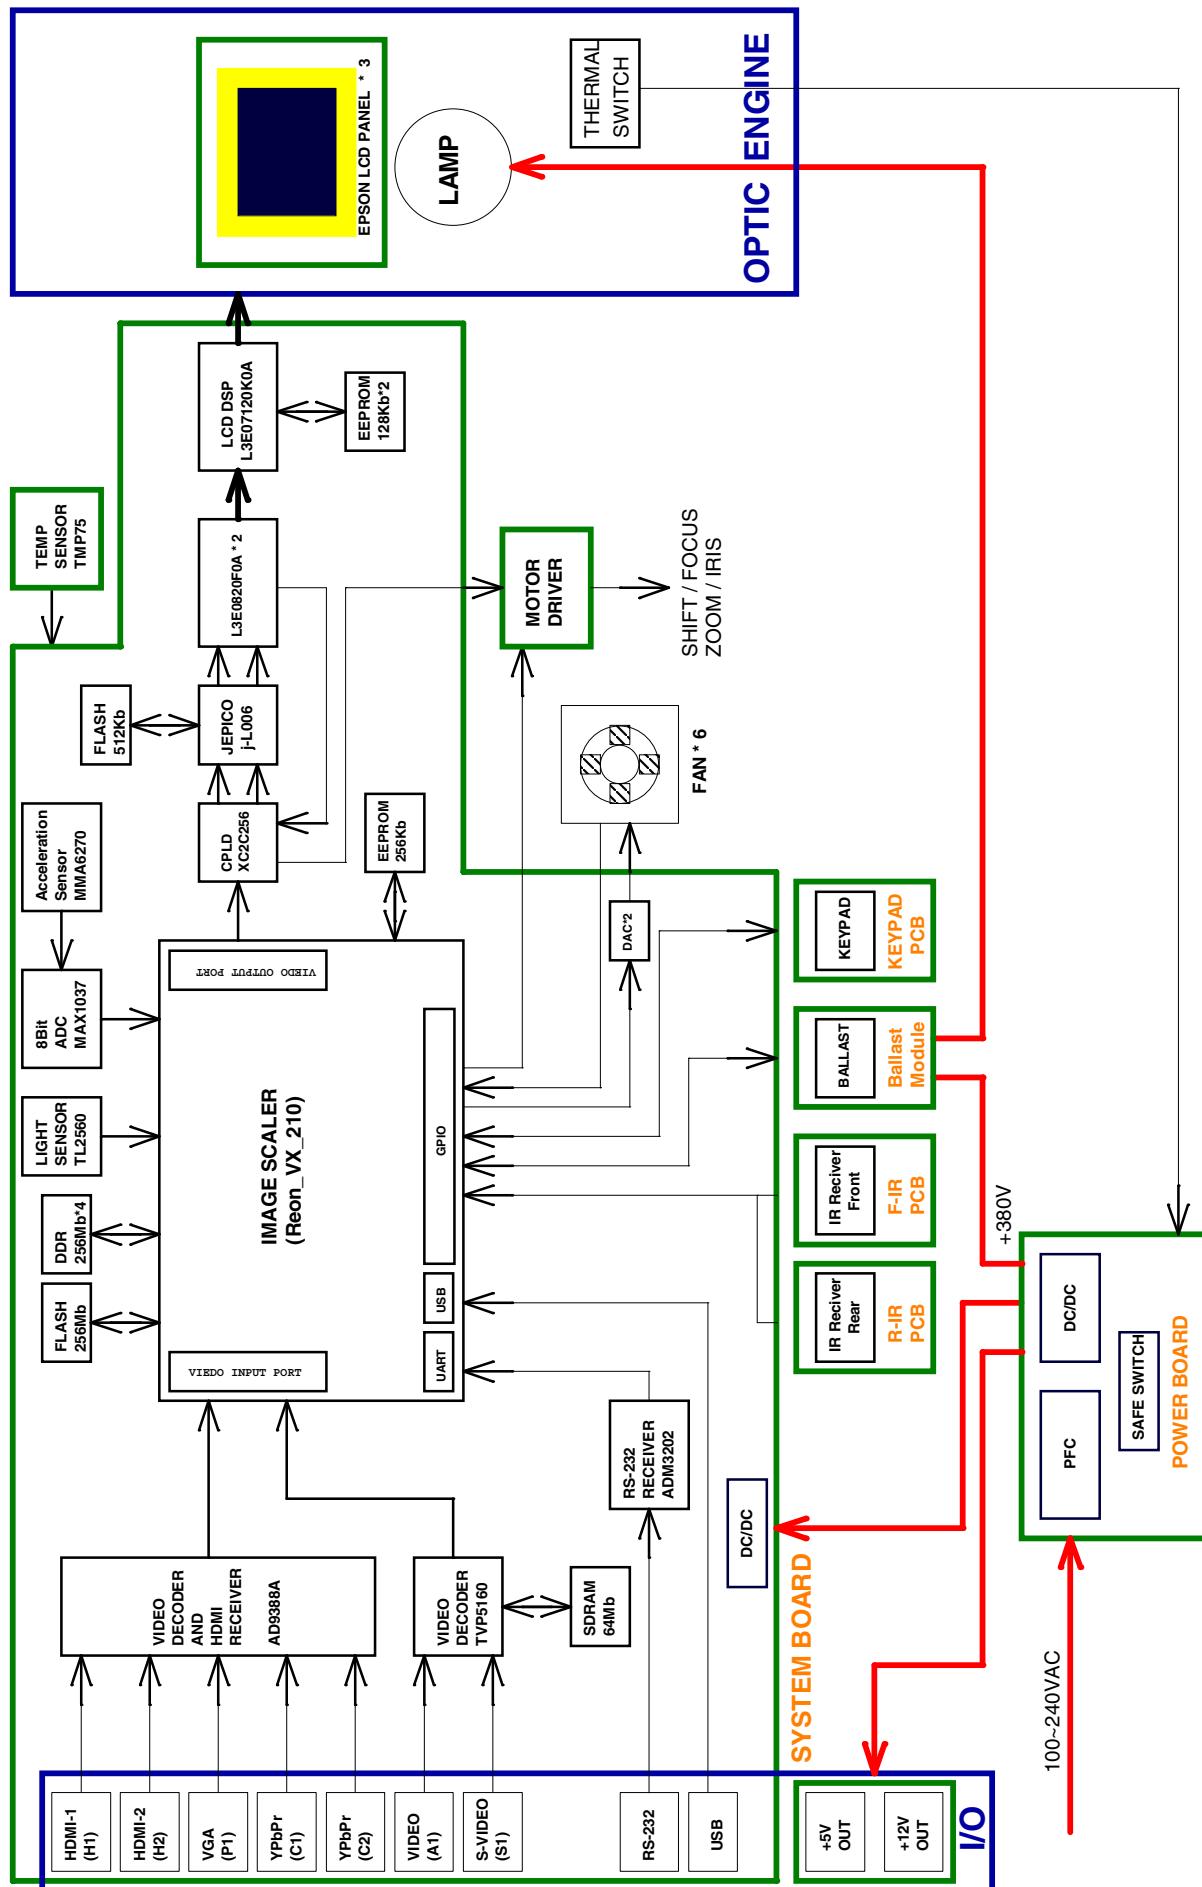

2. It can take a minute for the image to achieve full brightness. Press the direction keypad following the actions below:

Up twice, down twice, left once, right once, left once, right once($\blacktriangle\blacktriangle\blacktriangledown\blacktriangledown\blackleftarrow\blackrightarrow\blackleftarrow\blackrightarrow$), press the MENU button, Enter the engineer mode.

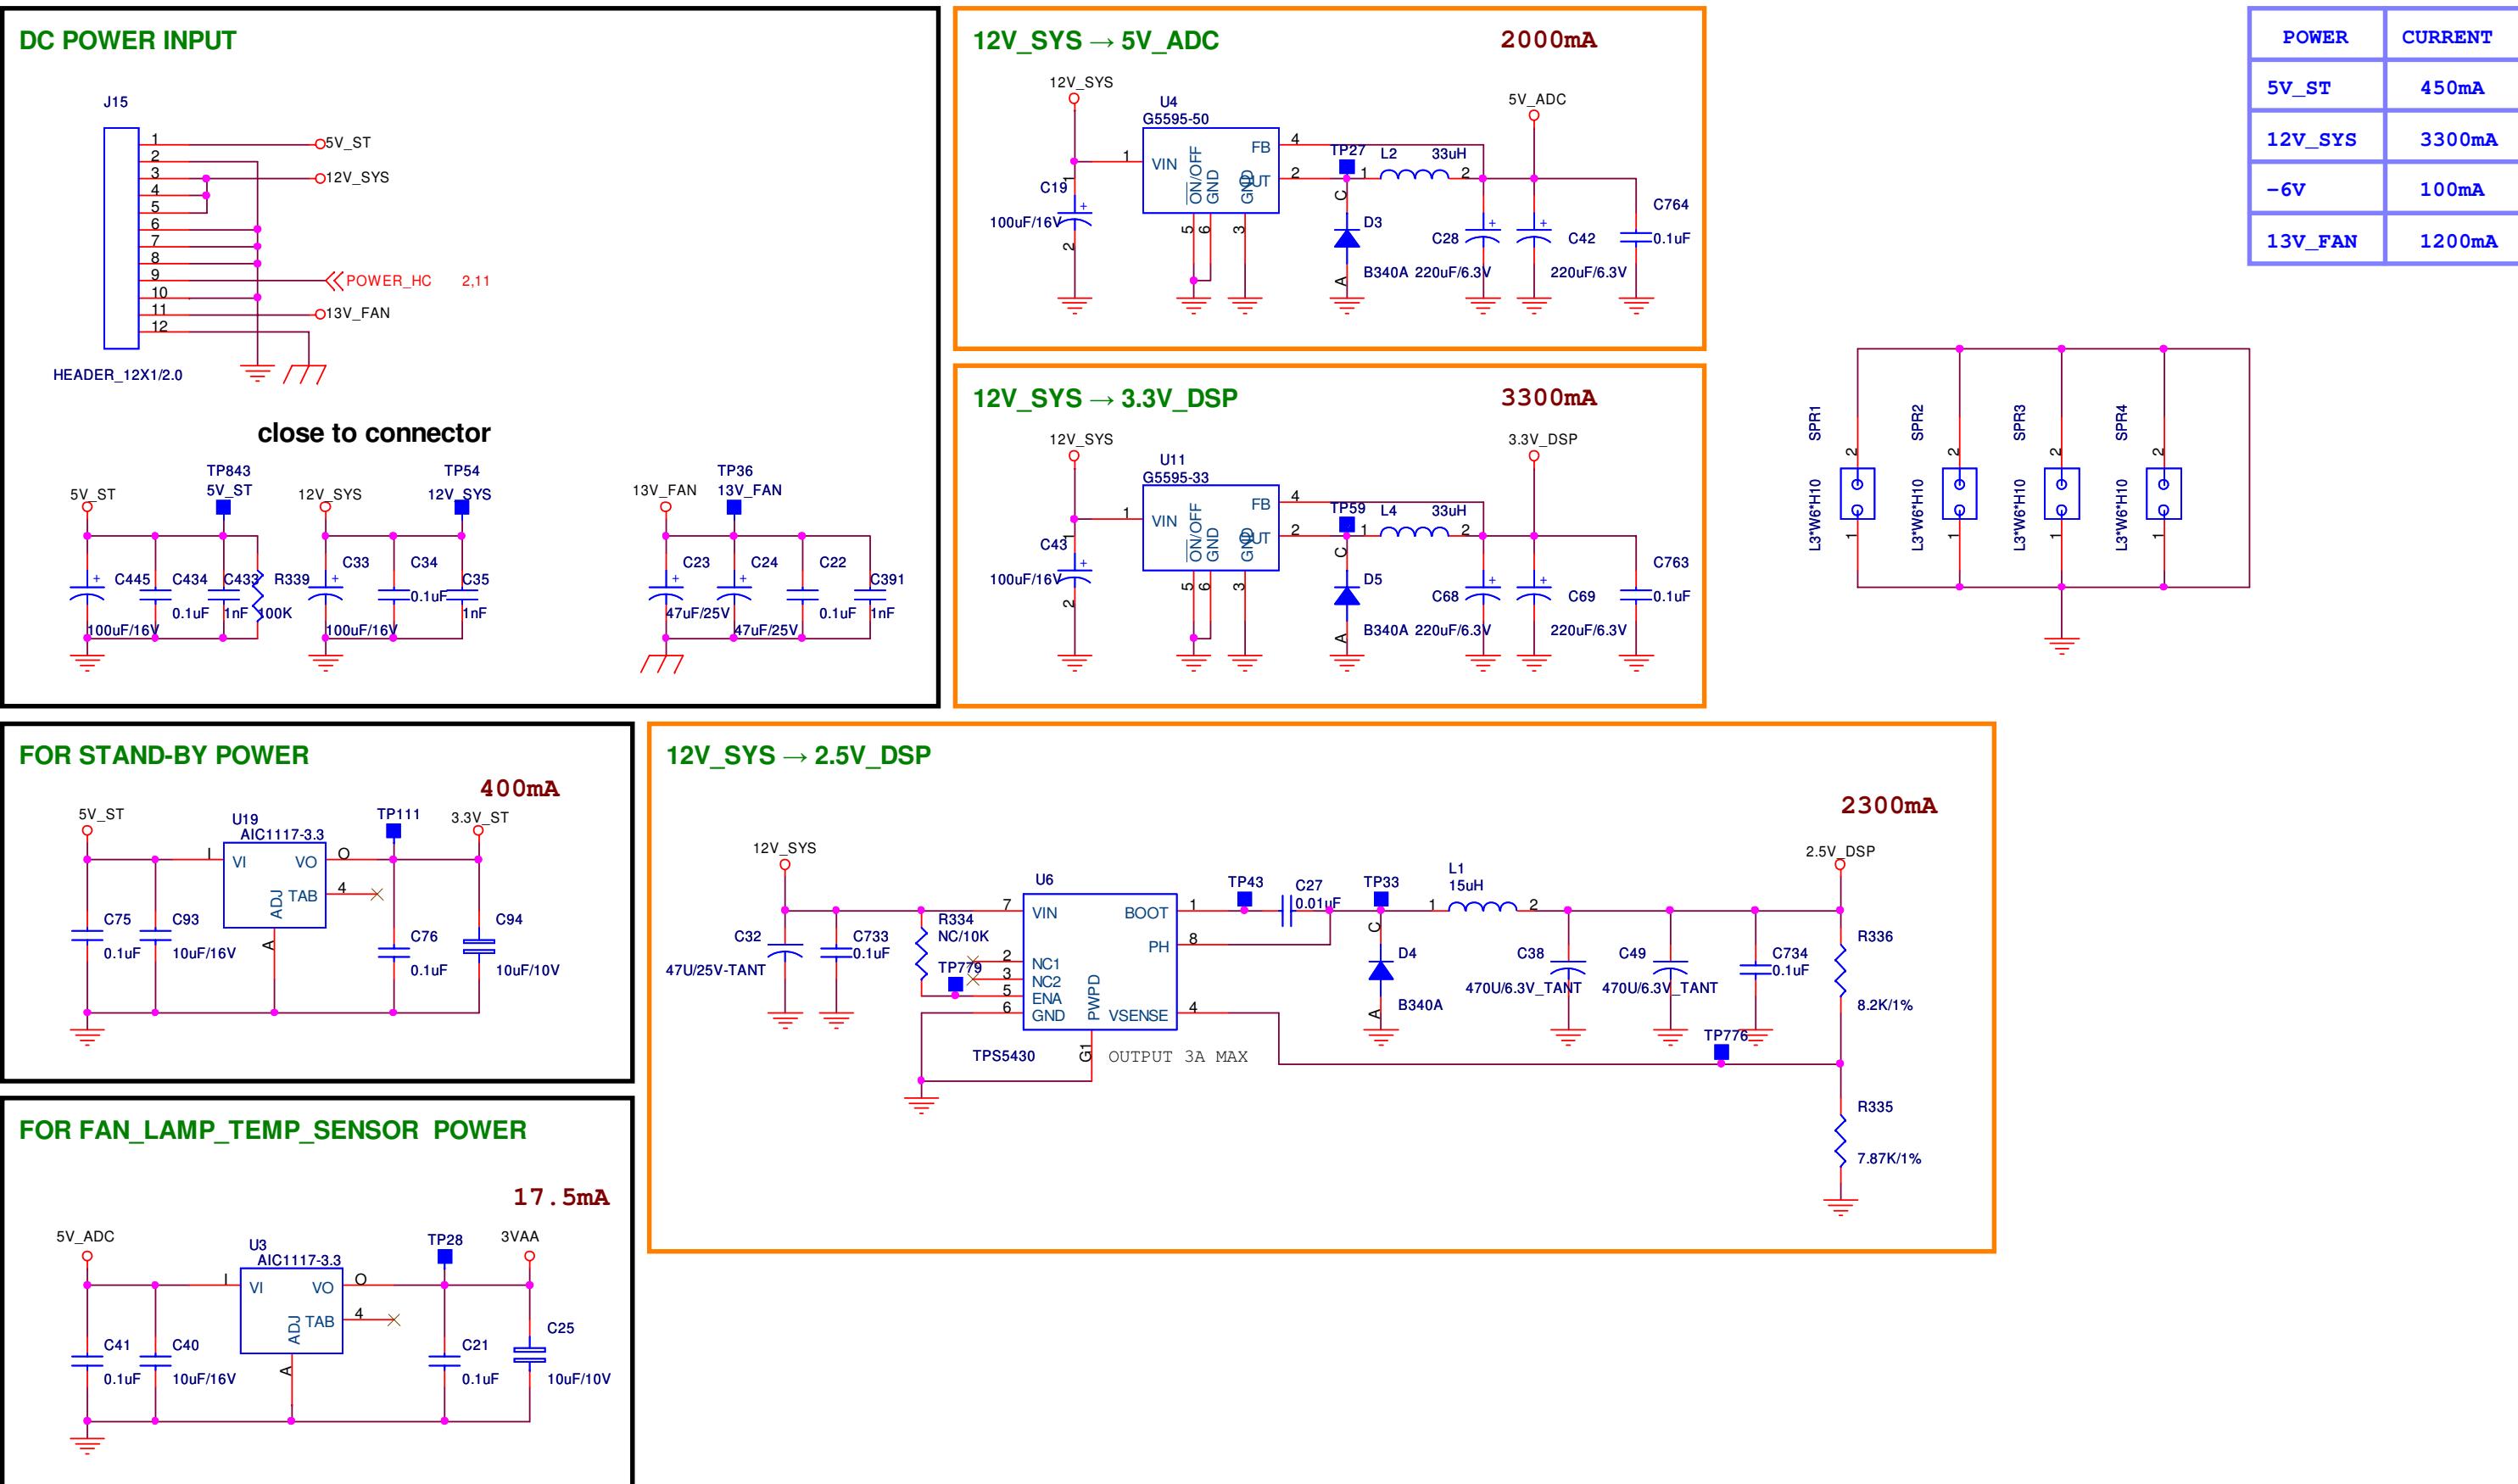

3. Choose the "ADC Calibration", press right key to conduct ADC calibration . do not go to next step until the image appears again, or it should be re-calibrated .

11. Appendix

Maintaining the Air Filter

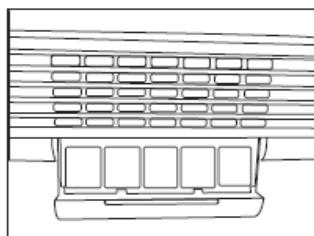

The air filter, which is located at the back of the projector, should be replaced or cleaned when warned by system either because 200 hours of use or rise of internal temperature. If it is not cleaned periodically, it can become clogged with dust and prevent the projector from being ventilated properly. This can cause over heating and damage the projector.

To clean the air filter:

1. Pull down the filter module cover.

2. Remove the filter module cover.

3. Remove the dirty filter directly.

4. Attach the clean air-filter.

5. Attach the filter cover to the projector.

Replacing the Air Filter

The air filter should be replaced when cleaning is ineffective contact an authorized service center for the optional air filter.

NOTE

- Turn off the projector and remove the AC power cord from the power outlet before beginning maintenance work.
- Make sure the lens is cool before cleaning.
- Do not use detergents or chemicals other than those noted above. Do not use benzene or thinners.
- Do not use chemical sprays.
- Use a soft cloth or lens paper only.

*** Reader's Response***

Dear Readers:

Thank you in advance for your feedback on our Service Manual, which allows continuous improvement of our products. We would appreciate your completion of the Assessment Matrix below, for return to ViewSonic Corporation.

Assessment

A. What do you think about the content of this Service Manual?

<i>Unit</i>	<i>Excellent</i>	<i>Good</i>	<i>Fair</i>	<i>Bad</i>
1. Precautions and Safety Notices				
2. Specification				
3. Front Panel Function Control Description				
4. Circuit Description				
5. Adjustment Procedure				
6. Troubleshooting Flow Chart				
7. Recommended Spare Parts List				
8. Exploded Diagram and Exploded Parts List				
9. Block Diagrams				
10. Schematic Diagrams				
11. PCB Layout Diagrams				

B. Are you satisfied with this Service Manual?

<i>Item</i>	<i>Excellent</i>	<i>Good</i>	<i>Fair</i>	<i>Bad</i>
1. Service Manual Content				
2. Service Manual Layout				
3. The form and listing				

C. Do you have any other opinions or suggestions regarding this service manual?

Reader's basic data:

Name:		Title:	
Company:			
Add:			
Tel:		Fax:	
E-mail:			

After completing this form, please return it to ViewSonic Quality Assurance in the USA at facsimile 1-909-839-7943. You may also e-mail any suggestions to the Director, Quality Systems & Processes (marc.maupin@viewsonic.com)
